Change log & How to use

Introducing Wholesale Web Toolkit 4.0.0

4.0.0 Release notes

Published: December 2021 with Sketch v.77

This toolkit should be used by any designer working on any Web/Desktop solution in HSBC Wholesale banking. It supersedes the V2 and V3 toolkits, although these are still valid if you are already using them.

- If you previously used Toolkit V3, use the 'Responsive' foundations and components to create a responsive solution across all screen sizes.
- If you previously used Toolkit V2, use the 'Compact Desktop' foundations and components to create desktop designs.
- If you need to make these desktop designs responsive, you can now use the equivalent 'Responsive' components for an accessible, touch-friendly experience on handheld devices.

Toolkit V2 components have been updated to Toolkit V3 specifications and conventions, with individual pages for each component and text measured by its bounding box.

! Always check with your design domain lead in your workstream if you have any questions.

Below is a list of inaccurracies / additions in the Responsive toolkit, which have been corrected in this version and should be implemented throughout other versions in circulation.

Responsive

How to use the toolkit & libraries | 1 of 1

What are Toolkits?

Toolkits are a repository of Elements, Patterns and Templates that incorporate the latest platform specific HSBC standards. These provide our teams with the initial building-blocks needed to create on-standard accessibile designs.

The Toolkit consists of the following files; Design Toolkit, Symbol Library and Icon Library. These files contain all the signed off colours, font styles, elements, patterns and templates plus some light touch guidance on how to use them.

The toolkits are designed to enable a more consistent and faster workflow for designers by providing signed off elements and patterns to build out designs across workstreams. The toolkits work in conjunction with the create.hsbc site which houses the overall global guidelines for digital design, so it's always worth visiting the site regularly to find out more information on the design foundations or individual elements and patterns.

As the standards evolve so do the Toolkits. Updates to these files are expected regularly and will be documented and recorded in this file's **Change Log / Release Notes** page.

Working with the Toolkit files

Do not edit any of the toolkit files. This is important as any changes made will not be saved when new versions of the toolkit are released. If you need to create any new symbols or styles please make sure these are saved to your local working files libraries and not the toolkit files. If you need changes or would like to add symbols to the toolkit please speak to your toolkit lead or owner about getting these incorporated into the next release.

'Working files' are a generic name given to a designer's work file and is not part of the toolkit but links to and accesses assets from it. Always create separate Working files and link to your Programme Toolkit Libraries.

Toolkit – Browser file

This is the main reference file for elements and patterns. Not all patterns can be created as symbols or nested symbols, so some times it is easier to show these in a second file (the toolkit file) that links to the main Library Browser file. There are some 'light touch' rules accompanying some of the elements and patterns. However please visit the create.hsbc for more guidance and information on how these should be used. Where necessary there are some tips on how to use the Sketch symbols within your working files.

Copy and pasting from the Toolkit Browser file

All the elements, patterns and templates are constructed using linked symbols and styles from the Libraries. Any elements, patterns or templates you copy and paste from the Toolkit Browser file to your work files will retain these links maintaining the path of updates to the Library. This will leave your local Work file symbol page free of duplicates.

Library – Browser file

This contains all the elements, colours and font styles for the programme. Always look to this file before creating any new symbols and styles in your working files to avoid creating duplicates. Do not edit this file or you will lose the changes when the next update is released. (See linking libraries).

Icon Library file

This contains the most up-to-date HSBC digital icons used across all channels. This file will be updated when new icons become available for use. Do not edit this file or you will lose the changes when the next update is released. Instead if you have had any icons approved by Digital Design but have not yet been released in an updated version of the Icon Library file, store the new icons in your local work files until they become available. (See linking libraries).

If you cannot find an appropriate icon to use from the library or the on the create.hsbc site, please contact your Creative Lead or you can email: global.marketing.digital.approvals@hsbc.com. There are guidelines on how to create new icons on create.hsbc, but please follow the guidelines for the approval process before using any new icons in your workstream.

Icon SVGs

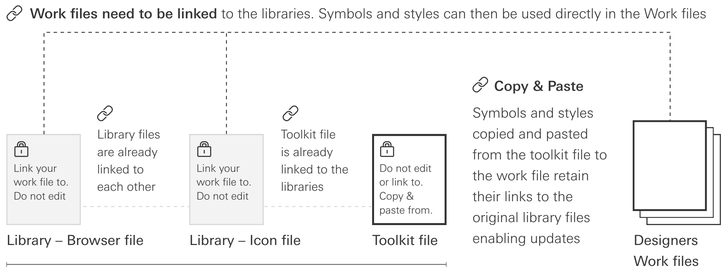
Icon SVGs are available to download from create.hsbc. Always use this source for icons first rather than exporting any icons from any of the Toolkit sketch files.

Setting up the toolkit with your working files

Linking libraries

Working files need to be linked to the Browser and Icon Libraries. This will ensure that any changes to the Library file symbols or styles will sync and ripple though the work files increasing efficiency of updates and maintain greater consistency.

Open Sketch's Preferences from the File menu (Command-Comma), and navigate to the Libraries tab. Select 'Add Library' and choose the Library document from your files. You will now be able to access all its styles and Symbols.



Toolkit files get updated and re-released. Each release needs to replace the previous toolkit files and re-linked by designers.

Using Symbols with Working files

There will be some scenarios where it makes sense to construct patterns within the Working file symbol page. An example of this may be particular instance of a table row. It would not make sense to produce every table row configuration or instance in either the Toolkit Library or the Toolkit file. However when creating symbols within the working file always try to use linked symbols and styles unmodified from the main Library. This will insure that basic symbols and styles will still get updated if linked to the Browser Library even though you have created a different pattern variation within your working file.

Using Styles with Working files

When using styles from the Browser Library try to use the appropriate UI styles first before using the Colour Swatch styles.

UI Styles

The UI styles are broken down and applied to specific elements and patterns; for example 'Text Inputs' or 'Icons'. This will help us to make more targeted changes to colours in future updates (including the use of themes) rather than sweeping changes that may not work across all elements and patterns.

Colour Swatch styles

These are intended mainly as reference colours. As we progress towards implementing theming and design tokens we will be using UI styles for all of our elements and patterns. For example, our icon default colour on white is #333333 taken from the Brand palette 'Charcoal'. If we were to switch colour themes for a sub-brand or third party brand they would likely have a different colour palette. Replacing the Brand Charcoal colour to another value may not be right for all the elements and patterns that use that reference. So we create a design token style approach for UI elements, in this case 'Icon-Default-OnWhite', which allows us to manage changes with more accuracy and detail.

Replacing updated toolkit files

Please check the change log of the new toolkit file before making any updates to your libraries or work files.

1. When updating a new set of libraries please archive the previous versions you were using for back up purposes or if you need to revert back due to any issues.
2. Make sure you remove the older libraries completely from your sketch preferences completely before updating.
3. Although the new libraries will have a new name, the sketch work files will automatically find the symbols within these files as they use sketch 'IDs' to reference rather than path or file naming to link to their source.
4. Back up a working file to test with the new Libraries before updating all your sketch files with any new or updated styles and symbols.
5. If you find any issues please report these immediately to your creative lead or the toolkit owner.

Working with multiple HSBC toolkits

If you are working with multiple HSBC toolkits it is important to only have the only the libraries for a particular project active in your preferences at one time and only the appropriate project work files open.

Different toolkits can contain duplicate symbols or styles which may inadvertently cause a clash or inappropriately update a symbol state or font syle. For instance a mobile app project could get incorrect update from a browser toolkit library!

1. Disable any non related project libraries in your Sketch preferences.
2. Only update related project work files from the correct toolkit libraries.
3. Do not work with work files from different toolkits simultaneously.

Naming considerations

Files

We use a three digit naming convention on toolkit files for versioning purposes e.g. 1.1.0

The third figure is to signify a bug fix to a previous release. So for example if toolkit 1.1.0 was released and a bug found, the update would be named 1.1.1.

The first two figures are used for incremental updates. However the first number can also be used as a branch departure for streams that can adopt the new releases as opposed to a stream that has to remain on a legacy toolkit for development reasons.

Symbols

Use hyphens for states "- Default"

Use brackets for colour "(OnDark) or (#333333)"

Use plus for 'with'. "Icon + Content + Action"

Use 'Ω Fragments' - to house nested symbols within Library folder structure

Use (on dark) - The element/style is to be placed on a dark BG (solid container/image)

Use (solid dark) - The element/pattern has a solid dark container held within the symbol

Use (on light) - The element/style is to be placed on a light BG (solid container/image)

Use (solid light) - The element/pattern has a solid light container held within the symbol

Programme Toolkit governance and updates

Creative Leads are responsible for making sure their ProgrammeToolkits are updated. Often this will be done by a member of their team, who becomes the elected Toolkit owner.

When the Programme Toolkit is changed or updated (e.g new symbols are added or tweaks), the Toolkit owner brings this to the attention of the HSBC Digital Design team for review.

If approved it is added to the linked Libraries and recorded in the **Change Log.**

Foundations

Grids, breakpoints and scales **for use with 'Responsive' components only.**

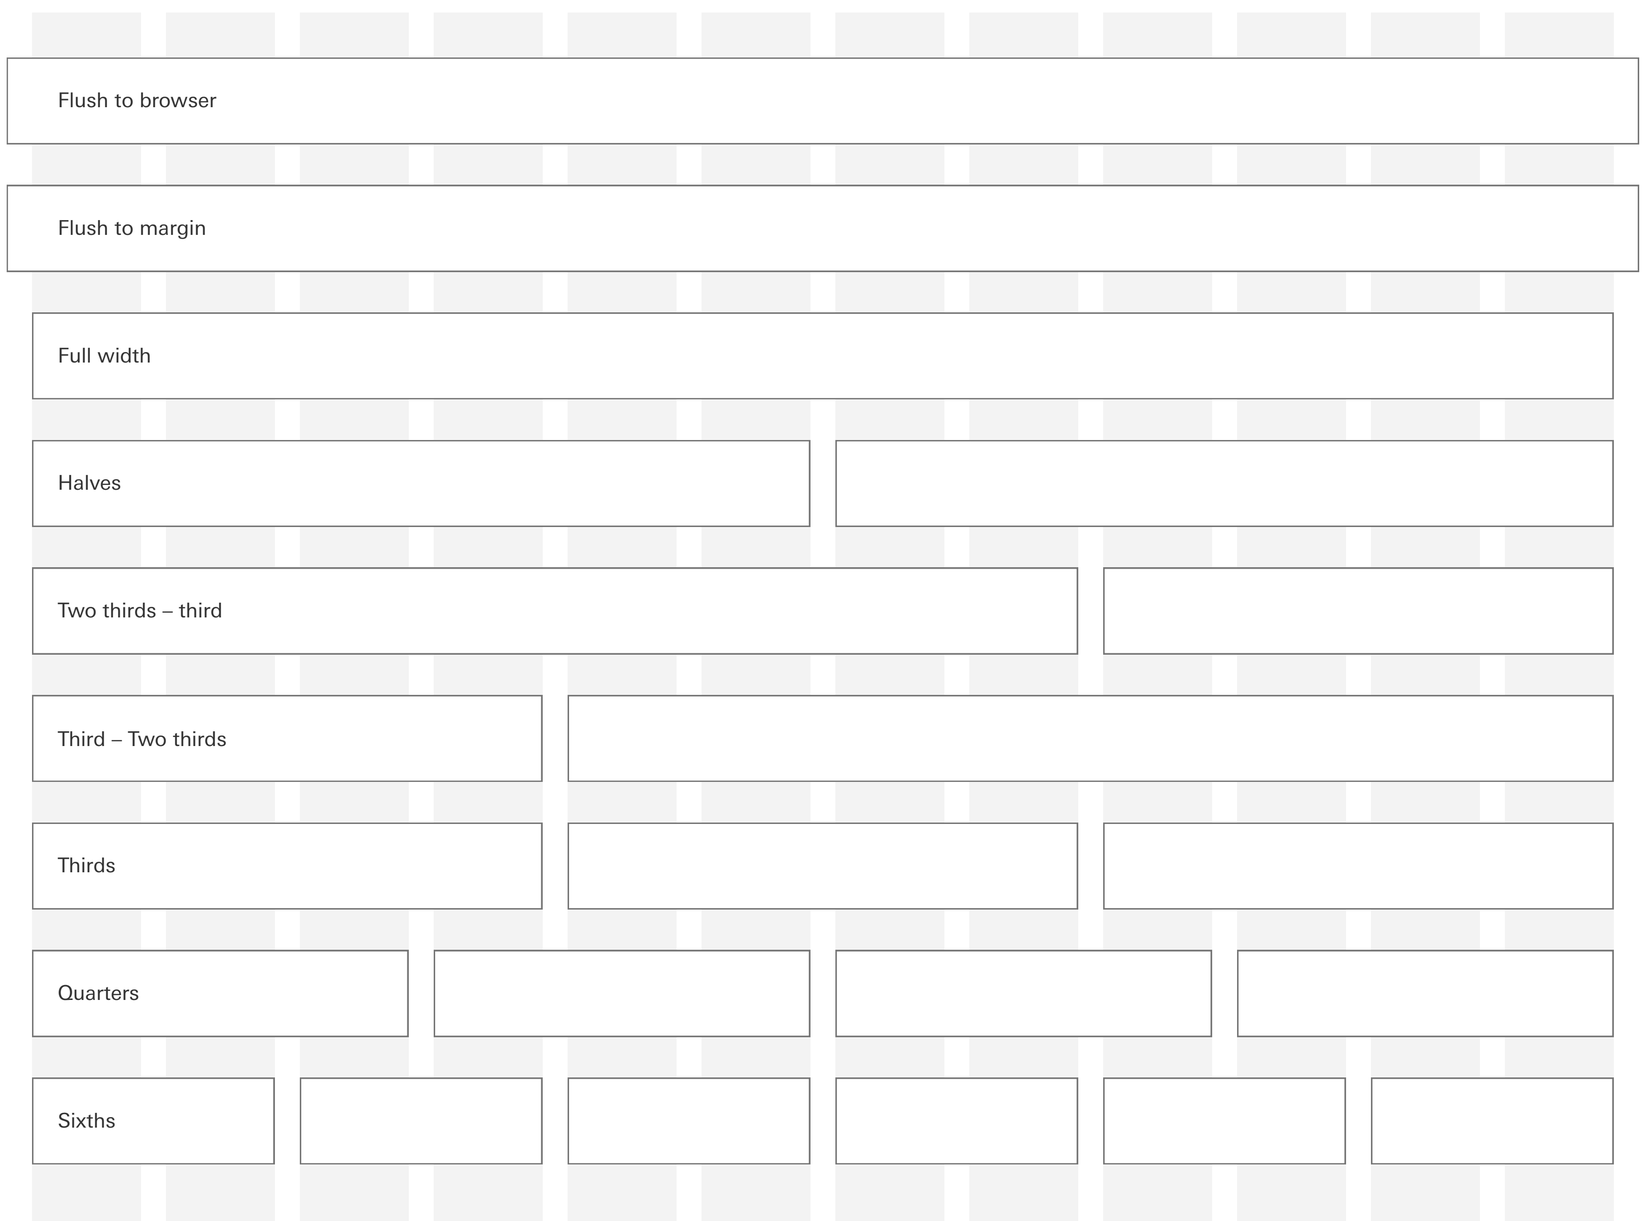
For more information on RScale and TScale conventions please look in the Foundation sections for Spacing and Typography respectively.

Viewport	Break point range	Columns Flexible widths	Gutters	Margins	RScale Responsive spacing	TScale Responsive typescale	
Extra Small	320 – 479	12	16px	16px	RS:1	TS:1	Responsive Scale:1 Used up to 959px
Small	480 – 759	12	16px	16px	RS:1	TS:1	
Medium Small	760 – 959	12	16px	16px	RS:1	TS:1	
Medium	960 – 1279	12	20px	20px	RS:2	TS:2	Responsive Scale:2 Used from 960px
Large	1280+	12	20px	20px	RS:2	TS:2	
Extra Large* (Marketing only)	1600+	12	24px	24px	RS:3	TS:3	Responsive Scale:3 Only used for marketing campaign pages

Column groupings

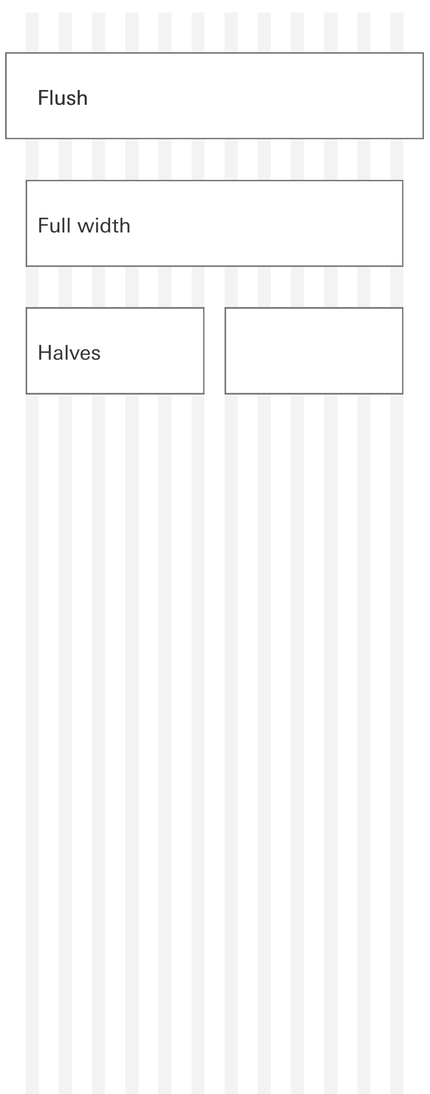
12 Columns

Using a 12 column grid enables us to group columns together to create consistent layouts that respond across screen sizes. The most common column groups are shown below.



320 visual layout

For mobile we still use a 12 column grid. However for practical reasons this means we rarely spit the grid into more than two groups of columns.

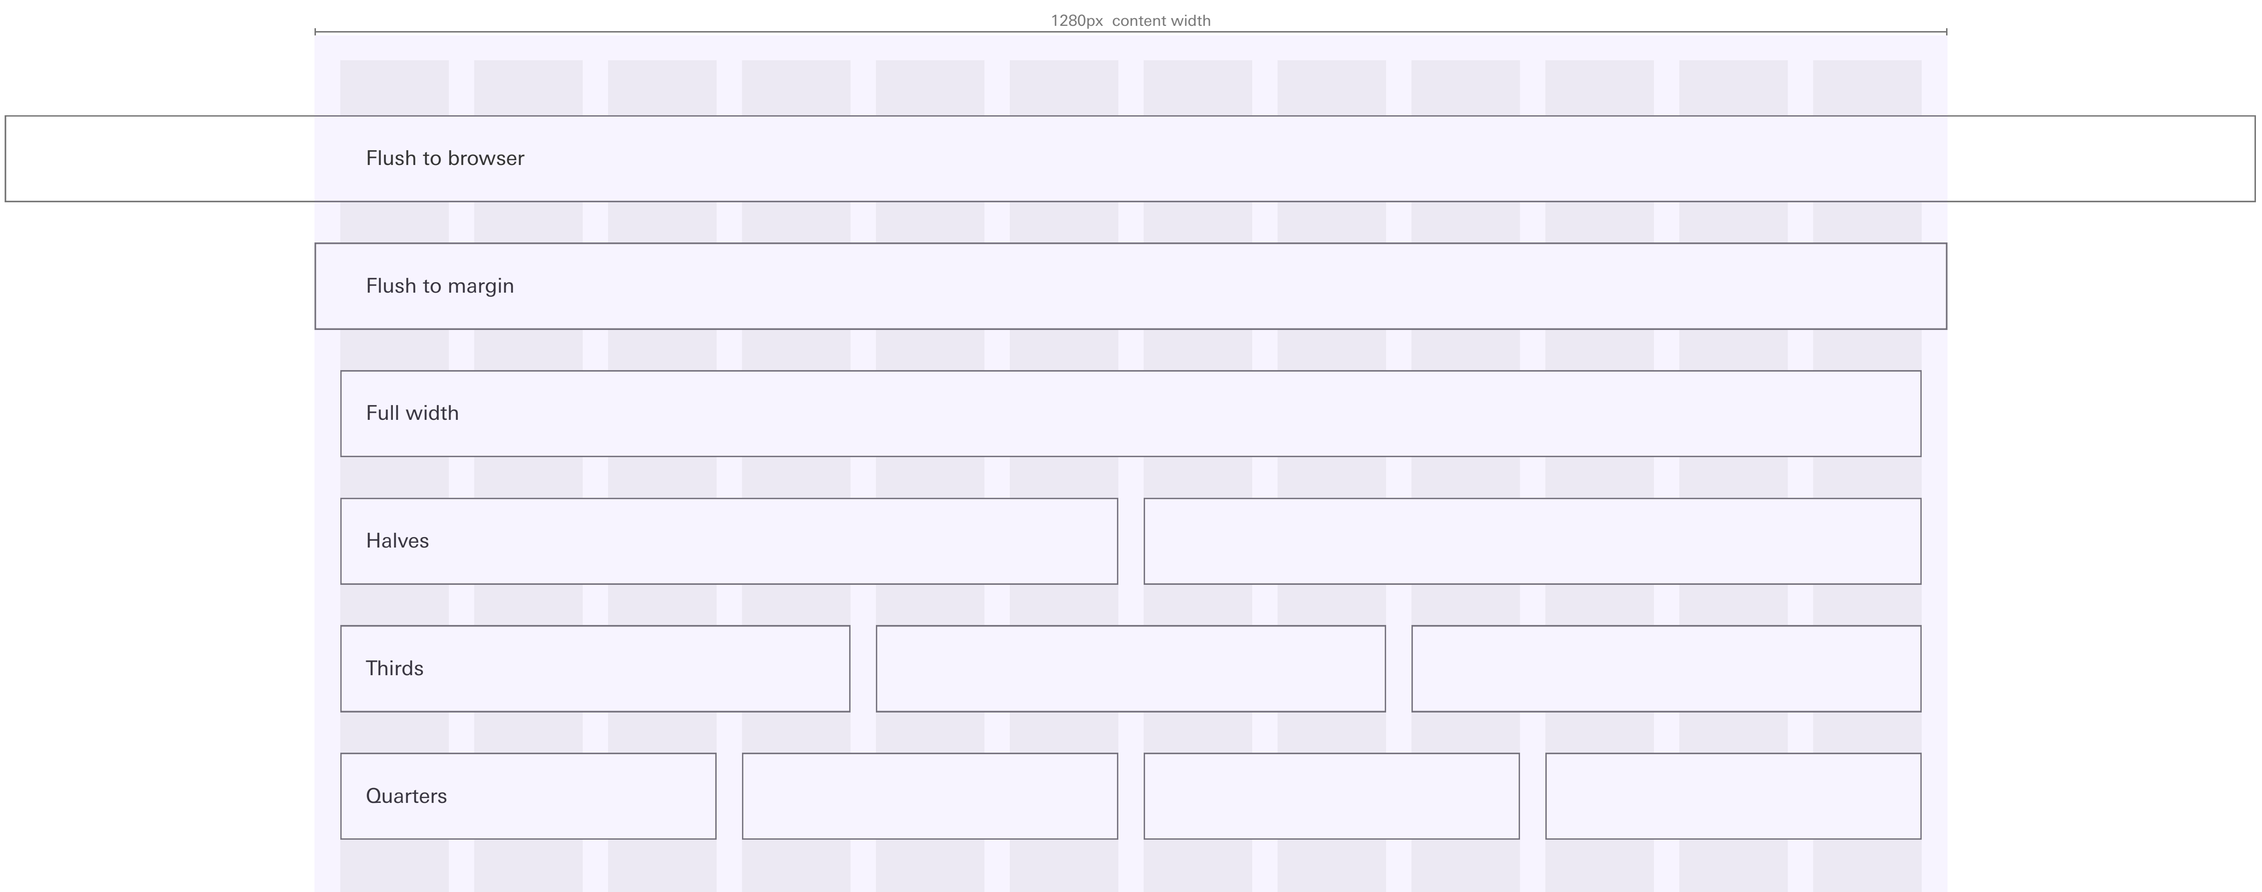


*Note: More combinations of column groupings can be used than shown above depending on content needs and layout requirements.

Content width: When to use Rscale:2 or 3 and TScale:2 or 3

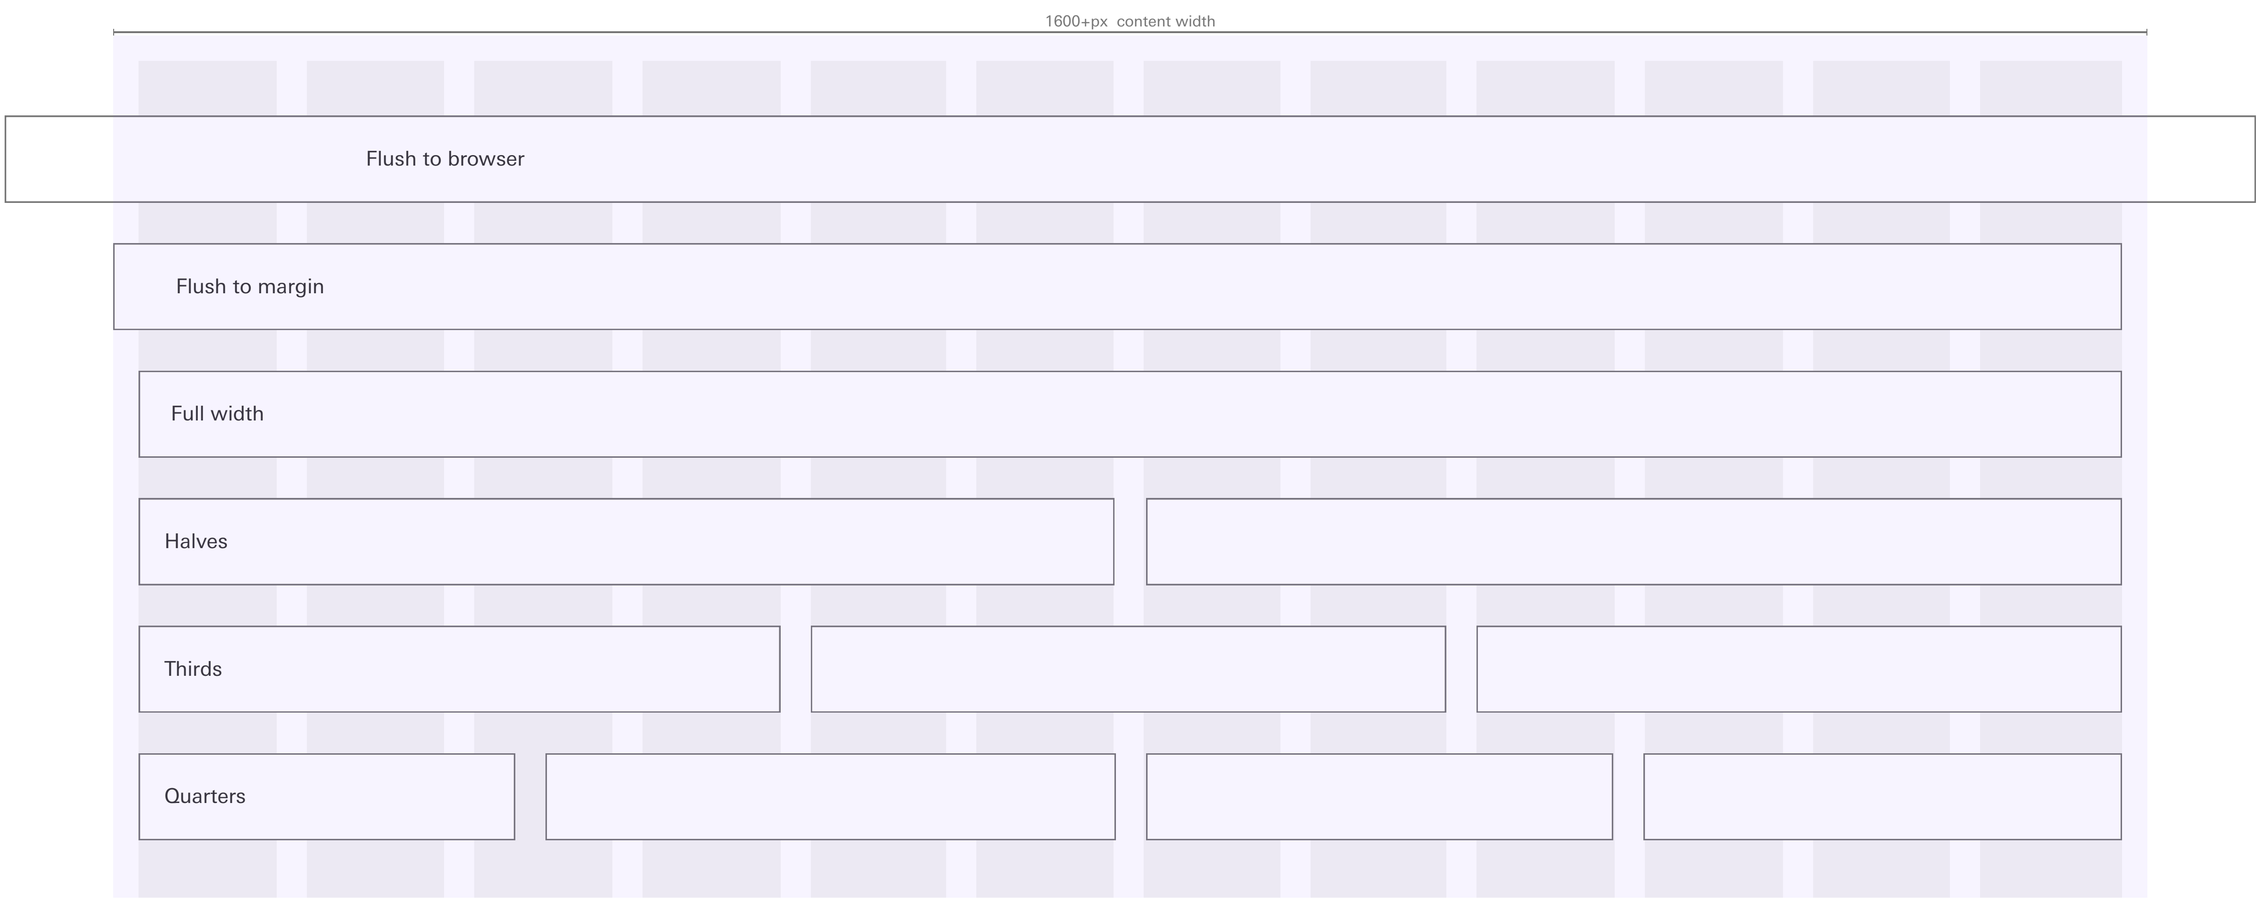
Using a content width of 1280, then use RScale:2 and TScale:2

If your content grid is primarily restricted to a maximum width of 1280px then continue to use RScale:2 and TScale:2 for all higher breakpoints. Some components or features can break outside of the grid – for example the image on a hero banner or a background colour for a content shelf – but using RScale:2 and TScale:2 will maintain greater consistency of journeys and user experience across other sites in the HSBC digital estate.



Using a content width 1600px or wider?

For marketing based campain pages that use a much wider content width with minimal copy and a high proportion of display imagery then it may be appropriate to use RScale:3 and TScale:3. If you are unsure whether to use RScale:3 or TScale:3 for a site please contact DD for advice and guidance.



Grid and scale for desktops 960+ **for use with 'Compact desktop' components only.**

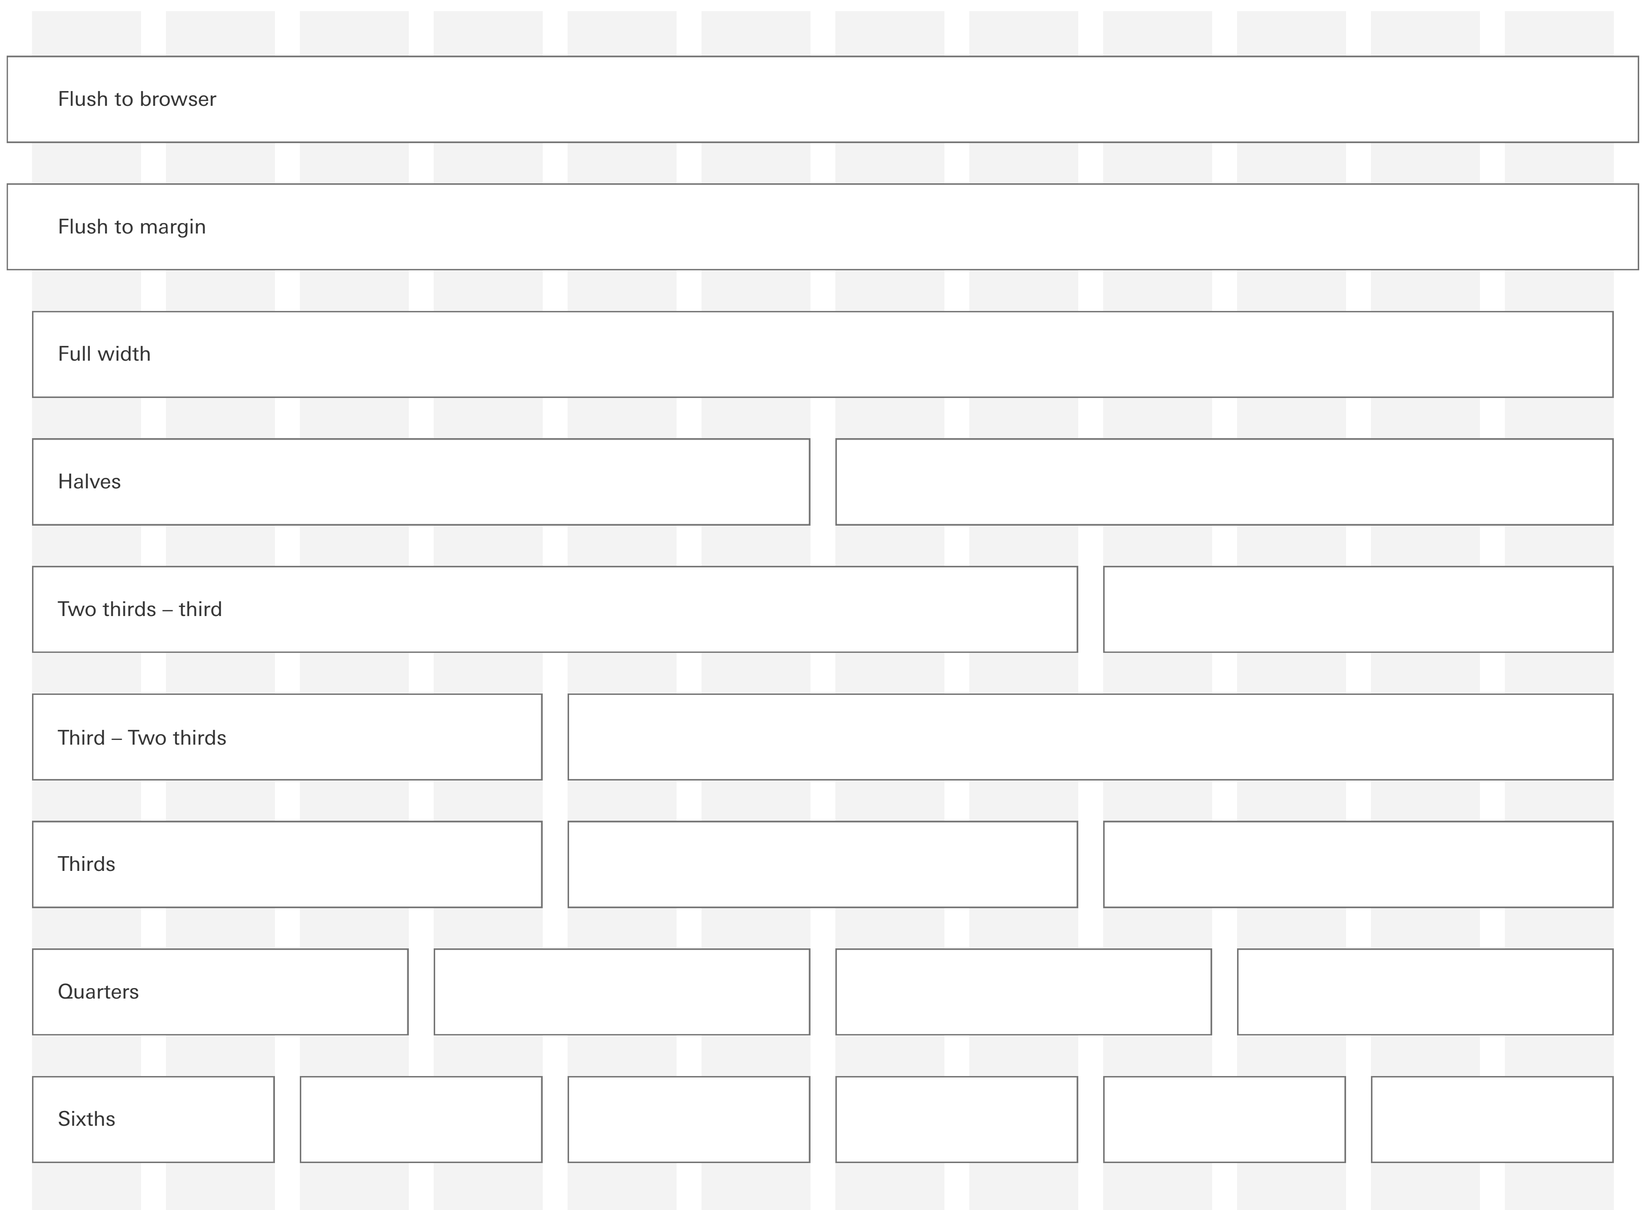
If you require your design to work on smaller touch devices, use the equivalent 'Responsive' components and foundations for mobile breakpoints.

Viewport	Range	Columns Flexible widths	Gutters	Margins	TScale
Medium / Large	960+	12	20px	20px	Compact desktop

Column groupings

12 Columns

A 12 column grid enables us to group columns together to create consistent layouts. The most common column groups are shown below.



*Note: More combinations of column groupings can be used than shown above depending on content needs and layout requirements.

Responsive and fixed spacing **for use with 'Responsive' components only.**

Introduction

We use these two types of spacing to help us have more control over our layouts across breakpoints. As we move from mobile to the larger breakpoints the typescale and screen sizes increase. To help balance these changes our responsive spacing scale increases space between elements. However there will be time when we don't want to increase the spatial relationship of certain elements – for example a form label distance to an text input – and for this we used fixed spacing.

To see both responsive and fixed spacing units working together in a page layout please see the examples opposite or go to the **Form Snippets** page in Elements and Patterns section of this document.

Base layout scale of 4 pixels

Horizontal and vertical spacing on our sites are based on multiples of four, mapping directly to the grid margins and gutters that also work to multiples of four. All padding and margins relating to elements on a page follow this system to create harmony and balance between everything on screen.

Responsive spacing scale (RScale or RS)

Responsive spacing is used for layout and larger elements where the relationship contributes to the overall structure of the page (e.g. padding between cards or between image and text). This scale allows us to increase the spacing dynamically depending on the breakpoint / screen size.

Responsive spacing units

Responsive units or 'R' units are typically used for laying out pages and components. They can also be used within patterns that need to increase in size across breakpoints e.g. cards, tables and expanding containers.

Unit	RScale:1 (px)	RScale:2 (px)	RScale:3 (px)
R0	0	+4 = 4	+8 = 8
R1	4	+4 = 8	+8 = 12
R2	8	+4 = 12	+8 = 16
R3	12	+4 = 16	+8 = 20
R4	16	+4 = 20	+8 = 24
R5	20	+4 = 24	+8 = 28
R6	24	+4 = 28	+8 = 32
R7	28	+4 = 32	+8 = 36
R8	32	+4 = 36	+8 = 40
R9	36	+4 = 40	+8 = 48
R10	40	+8 = 48	+16 = 56
R11	44	+8 = 52	+16 = 60
R12	48	+8 = 56	+16 = 64

Note: For standard pages where the content width is constrained to 1280px, RScale:3 is not used.

Fixed spacing units

As the name suggested fixed spacing stays the same value across all breakpoints. This spacing is used most commonly in small elements e.g. buttons, tabs, inputs and dropdowns. Spacing values are expressed as pixel values e.g F4 = 4px, F8 = 8px. We try to stick with the Base layout scale of 4 pixels where possible.

Example units	RScale:1 (px)	RScale:2 (px)	RScale:3 (px)
F4	4	4	4
F20	20	20	20
F44	44	44	44

Note: For standard pages where the content width is constrained to 1280px, RScale:3 is not used.

Spacing and the text bounding box

For specifications we use measurements to the text bounding box, rather than the traditional font cap height and baseline. This form of specification is easier for developers to work with to get their code to more closely reflect the designs. Sometimes due to a slight difference of how fonts work in Sketch and Browser there may have to be little tweaks. To help a developer understand what we are trying to achive with a design we add notes to show how we want the type to appear e.g. centerd on the height of the button.

Example specifying text spacing for a button

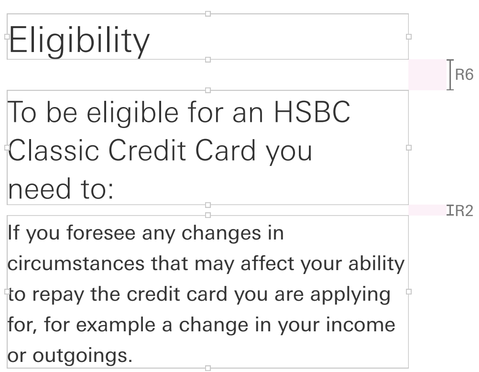
Visual guide for developer to check alignment

The text should be visually aligned to be vertically centred using the Cap Height and the baseline of the font. The type alignment specs may need slight adjustment due to the difference in font rendering between sketch and code.

Actual guide for the text bounding box

This shows the actual position for the text bounding box (we've added a mock bounding box just for clarity in this example).

Example specifying text spacing in a layout



Using the text bounding box

Spacing is measured between the text bounding boxes. We tend to use responsive spacing in layouts to allow for extra spacing when the typescale changes and screens have more space.

Example layout with both responsive and fixed spacing

To see both responsive and fixed spacing units working together in a page layout please go to the **Form Snippets** page in Elements and Patterns section of this document.

Spacing for desktops 960+ using **'Compact desktop' components only.**

Spacing units

We use fixed pixel units for spacing, see the examples opposite or go to the Form Snippets page in Elements and Patterns section of this document.

Spacing and the text bounding box

For specifications we use measurements to the text bounding box, rather than the traditional font cap height and baseline. This form of specification is easier for developers to work with to get their code to more closely reflect the designs. Sometimes due to a slight difference of how fonts work in Sketch and Browser there may have to be little tweaks. To help a developer understand what we are trying to achive with a design we add notes to show how we want the type to appear e.g. centerd on the height of the button.

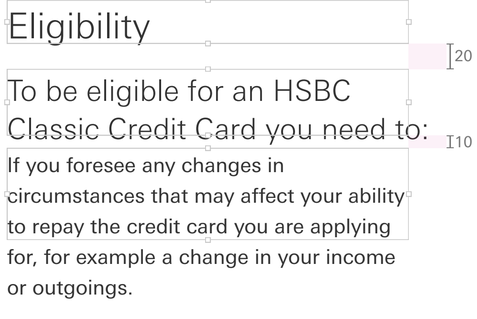
Example specifying text spacing in a layout



Using the text bounding box

Spacing is measured between the text bounding boxes. We tend to use responsive spacing in layouts to allow for extra spacing when the typescale changes and screens have more space.

Example layout with fixed spacing

To see page layout please go to the **Form Snippets** page in Elements and Patterns section of this document.

Typography for use with **'Responsive' components only.**

Univers Next for HSBC is a custom cut of the classic typeface. We use it to ensure a unified and consistent voice across all media and channels.

Please ensure that you use the latest version of the font available for download from the UI Centre. A version is also available on the UI Centre for web use.

Weights

For digital use, we use 3 font weights. The typeface should not be altered in any way. Do not use any of these weights in italics.

Univers Next for HSBC Light

Univers Next for HSBC Regular

Univers Next for HSBC Medium

Readability and legibility

Making sure copy is easy to read is a priority when considering how to layout content within a page design. Several factors within a design and layout can affect how readable and legible content becomes. Below are some things to consider when working with type.

Tracking (letter spacing)

Univers Next for HSBC was designed with optimal letter spacing built into the typeface. Do not apply any tracking to the typeface as this removes any kerning and visually breaks key character combinations. Maintaining the default tracking makes the typeface more readable.

Measure (line-length)

When the column width is set too narrow for longer content, the user has to scan many line 'returns' which can lead to reduced comprehension. When the column width is set too wide, alignment confusion when shifting from the end of one line to the beginning of another can occur. For best readability, stick to 'average' line length, which is usually between 50 and 80 characters. An example of this would be using the body copy size of 16px across 6 columns on desktop.

Line and paragraph spacing

Line and paragraph spacing has been specified for each size in the typescale to ensure consistent and readable content. The paragraph spacing for each font size has been set to half the size of the line spacing

Sentence case

HSBC uses sentence case, capitalising only the first word and any proper nouns. This style is the easiest and most natural to read and scan.

Contrast and WCAG AA accessibility

Type contrast is essential for readability. Wherever type is used it must have sufficient contrast to the background colour to pass WCAG AA accessibility standards. An exception to AA contrast compliance is the use of disabled text which does not have to meet with these guidelines.

Type colour

Our standard colour-ways are listed below. However always check colour contrast adheres to AA standards if not using either a solid white or black background.

On light	On dark
	Aa
R:51 G:51 B:51 Hex: #333333	R:255 G:255 B:255 Hex: #FFFFFF

Typescale: One type scale with a hierarchy of seven

Our typographic scale of seven sizes has been designed to adapt across devices and viewports whilst maintaining a clear hierarchical structure. Only one type scale instance can be applied to a breakpoint. You cannot mix type sizes from different typescales. There may be some instances where there is a need for larger font size, e.g. larger numbers in data visualisation, but these should be specified at component level and not be included within the default type scales.

Naming conventions

TScale:1,2,3 and TS:1,2,3

These are abbreviations for the three instances of our typographic scale. Where space allows use the longer contraction for clarity e.g. TScale:1 rather than TS:1.

What are 'S' sizes?

We use the term 'S' to describe a font size from the typescale, e.g. S1, S2, S3 and so on. These 'S' sizes can be applied to HTML type mark up – for instance H1, H4, Body, Paragraph etc – if semantically correct to do so.

Sizes S5 – S7

Sizes S5, S6 and S7 remain the same size across all three typescales.

Size 1 (S1)	TScale:1	TScale:2	TScale:3
Font size px (ems)	33 (2.063)	44 (2.750)	57 (3.563)
Leading px (em)	40 (1.2)	50 (1.15)	66 (1.15)
Paragraph px (em)	20 (1.250)	25 (1.563)	33 (2.063)

Size 2 (S2)	TScale:1	TScale:2	TScale:3
Font size px (em)	28 (1.750)	35 (2.188)	43 (2.688)
Leading px (em)	36 (1.3)	42 (1.2)	52 (1.2)
Paragraph px (em)	18 (1.125)	21 (1.313)	26 (1.625)

Size 3 (S3)	TScale:1	TScale:2	TScale:3
Font size px (em)	23 (1.438)	28 (1.750)	32 (2.000)
Leading px (em)	30 (1.3)	36 (1.3)	42 (1.3)
Paragraph px (em)	15 (0.938)	18 (1.125)	21 (1.313)

Size 4 (S4)	TScale:1	TScale:2	TScale:3
Font size px (em)	19 (1.188)	22 (1.375)	24 (1.563)
Leading px (em)	27 (1.4)	31 (1.4)	31 (1.3)
Paragraph px (em)	14 (0.875)	16 (1.000)	16 (1.000)

Size 5 (S5)	TScale:1	TScale:2	TScale:3
Font size px (em)	16 (1.000)	16 (1.000)	16 (1.000)
Leading px (em)	24 (1.5)	24 (1.5)	24 (1.5)
Paragraph px (em)	12 (0.750)	12 (0.750)	12 (0.750)

Size 6 (S6)	TScale:1	TScale:2	TScale:3
Font size px (em)	14 (0.875)	14 (0.875)	14 (0.875)
Leading px (em)	20 (1.4)	20 (1.4)	20 (1.4)
Paragraph px (em)	10 (0.625)	10 (0.625)	10 (0.625)

Size 7 (S7)	TScale:1	TScale:2	TScale:3
Font size px (em)	12 (0.750)	12 (0.750)	12 (0.750)
Leading px (em)	16 (1.3)	16 (1.3)	16 (1.3)
Paragraph px (em)	8 (0.500)	8 (0.500)	8 (0.500)

Responsive behaviour

We use one scale that can increase in ratio as viewports enlarge. The scale has been designed to be flexible to suit the different content type requirements across the HSBC estate.

Note: The greyed out areas are not needed for the Core CMB sites.

Non responsive (e.g. HSBCnet)

TScale:1 (Breakpoint 320+)

Responsive Marketing (campaign pages)

TScale:1 (Breakpoint 320 – 959) | TScale:2 (Breakpoint 960 – 1599) | TScale:3 (Breakpoint 1600+)

Responsive Default (e.g. global default)

TScale:1 (Breakpoint 320 – 959) | TScale:2 (Breakpoint 960+)

TScale:1 (BP 320 – 959)

Taking a mobile first approach, all designs will start with the smallest type scale ratio of TS:1 from BP 320 moving onto TS:2 from BP 960.

TScale:1

S1 33 Together we thrive

S2 28 Together we thrive

S3 23 Together we thrive

S4 19 Together we thrive

S5 16 Together we thrive

S6 14 Together we thrive

S7 12 Together we thrive

TScale:2 (BP 960+)

From BP 960 the second type scale ratio of TS:2 is applied. The use of this type scale from this breakpoint will be sufficient for most programmes across large tablets and all desktop viewports.

TScale:2

S1 44 Together we thrive

S2 35 Together we thrive

S3 28 Together we thrive

S4 22 Together we thrive

S5 16 Together we thrive

S6 14 Together we thrive

S7 12 Together we thrive

TScale:3 (marketing / campaigns. BP 1600+)

This ratio is only used when content widths are significantly wider than the default 1280px. The most common use for this scale is for marketing and campaign pages that use full width imagery and are graphically rich with minimal content.

TScale:3

S1 57 Together we thrive

S2 43 Together we thrive

S3 32 Together we thrive

S4 24 Together we thrive

S5 16 Together we thrive

S6 14 Together we thrive

S7 12 Together we thrive

Note: For standard pages where the content width is constrained to 1280px, TScale:3 is not used.

Font weights

These are the default font weights running through the designs. However, sometimes the weight can be changed depending on the context or component. For instance, help text within forms is S6 light, to give contrast to the label weight of S5 regular.

Font sizes: S5-S7

Example link one

Font weight: Regular

Font sizes: S1-S4

Example link

Font weight: Light

Utility Classes

These typographic classes have strict uses cases that must be followed.
They are not to be used in place of our standard S1–S7 sizes.

Article Large

Use case

This class is only to be used for the main body copy for articles and reports to enhance readability when the standard body copy S5 is deemed to be too small for the content width.

Implementation

As well as using the class for the body copy it can be used for ordered, unordered and custom lists within an article / report page. The class has all the same inline linking style properties as standard S5 body copy.

Typography for use with **'Compact desktop' components only.**

Univers Next for HSBC is a custom cut of the classic typeface. We use it to ensure a unified and consistent voice across all media and channels.

Please ensure that you use the latest version of the font available for download from the UI Centre. A version is also available on the UI Centre for web use.

Weights

For digital use, we use 4 font weights. The typeface should not be altered in any way. Do not use any of these weights in italics.

Univers Next for HSBC Light

Univers Next for HSBC Regular

Univers Next for HSBC Medium

Univers Next for HSBC Bold

Readability and legibility

Making sure copy is easy to read is a priority when considering how to layout content within a page design. Several factors within a design and layout can affect how readable and legible content becomes. Below are some things to consider when working with type.

Tracking (letter spacing)

Univers Next for HSBC was designed with optimal letter spacing built into the typeface. Do not apply any tracking to the typeface as this removes any kerning and visually breaks key character combinations. Maintaining the default tracking makes the typeface more readable.

Measure (line-length)

When the column width is set too narrow for longer content, the user has to scan many line 'returns' which can lead to reduced comprehension. When the column width is set too wide, alignment confusion when shifting from the end of one line to the beginning of another can occur. For best readability, stick to 'average' line length, which is usually between 50 and 80 characters. An example of this would be using the body copy size of 16px across 6 columns on desktop.

Line and paragraph spacing

Line and paragraph spacing has been specified for each size in the typescale to ensure consistent and readable content. The paragraph spacing for each font size has been set to half the size of the line spacing

Sentence case

HSBC uses sentence case, capitalising only the first word and any proper nouns. This style is the easiest and most natural to read and scan.

Contrast and WCAG AA accessibility

Type contrast is essential for readability. Wherever type is used it must have sufficient contrast to the background colour to pass WCAG AA accessibility standards. An exception to AA contrast compliance is the use of disabled text which does not have to meet with these guidelines.

Type colour

Our standard colour-ways are listed below. However always check colour contrast adheres to AA standards if not using either a solid white or black background.

On light	On dark
	Aa
R:51 G:51 B:51 Hex: #333333	R:255 G:255 B:255 Hex: #FFFFFF

Typescale: One type scale with a hierarchy of six

To achieve a more compact layout on desktops use 'TScale:Compact Desktop' with the 'Compact desktop' components. This method is stictly reserved for 960+ desktop designs. If you require these designs to work on smaller touch devices, use the 'Responsive' foundations and components at those breakpoints.

You cannot mix type sizes from different typescales. There may be some instances where there is a need for larger font size, e.g. larger numbers in data visualisation, but these should be specified at component level and not be included within the default type scales.

Naming conventions

What are 'S' sizes?

We use the term 'S' to describe a font size from the typescale, e.g. S1, S2, S3 and so on. These 'S' sizes can be applied to HTML type mark up – for instance H1, H4, Body, Paragraph etc – if semantically correct to do so.

Size 1 (S1) — TScale: Compact desktop

Font size px (ems)	26
Leading px (em)	34

HSBC

Status	WCAG 2.1 AA compliance
Aa	Passes for all sizes of text.
A	Passes for text larger than 18pt (24px). Passes for text that is bold and larger than 14pt (19px).
No letter	No letter on a colour swatch denotes it fails colour contrast standards for text.

Using Aa to denote colour contrast compliance

Colour swatches can have the following combinations of Aa, A or nothing at all to denote how they comply to WCAG 2.0 AA standards in relation to colour contrast with text. Dark text on the colour swatch is using #333333 as the text colour, whilst white text on the swatch is using #FFFFFF as the text colour.

Brand

Light Pearl, Pearl and Charcoal were added as supporting digital colours to help visual hierarchy within UI design.

Note: Care should be taken when using Light Pearl as it can be too light to appear on some monitors when used as keylines. It should be used as a fill colour, preferably with a darker border.

01 (HSBC Red)	02 (Black)	03 (White)	05 (Light Pearl)	05 (Pearl)	06 (Silver)	07 (Pewter)	08 (Charcoal)
Aa	Aa	Aa	Aa	Aa	Aa	Aa	Aa

Data visualisation

The data visualisation palette for web and apps has been optimised for AA compliance and can only be used on either a white or a black background.

Note: Colour flows from left to right, 01 to 14. Colours should be used in that order, even if starting in the middle of the range.

01 (Dusk Pearl)	02 (Jade)	03 (Emerald)	04 (Amber)	05 (Ruby)	06 (Iolite)	07 (Sapphire)
A A	A A	A A	A A	Aa	Aa	A A
R:109 G:142 B:166 Hex: #6D8EA6	R:20 G:165 B:171 Hex: #14A5AB	R:79 G:166 B:47 Hex: #4FA62F	R:230 G:115 B:16 Hex: #E67310	R:215 G:30 B:141 Hex: #D71E8D	R:131 G:78 B:255 Hex: #834EFF	R:37 G:128 B:220 Hex: #2580DC

08 (Dark Pearl)	09 (Dark Jade)	10 (Dark Emerald)	11 (Dark Amber)	12 (Dark Ruby)	13 (Dark Iolite)	14 (Dark Sapphire)
Aa	A	A	A	Aa	Aa	Aa
R:77 G:100 B:166 Hex: #4D6474	R:0 G:133 B:128 Hex: #008580	R:52 G:136 B:15 Hex: #34880F	R:191 G:97 B:15 Hex: #BF610F	R:168 G:22 B:109 Hex: #A8166D	R:102 G:55 B:213 Hex: #6637D5	R:21 G:100 B:181 Hex: #1564B5

Note: Colour flows from left to right, colours should be used in that order.

Typography

The values for style 01 and 02 have been chosen in preference to pure black or white for legibility reasons. This helps with the anti-aliasing on screen and improves readability.

On dark 01	On light 01
	Aa
R:51 G:51 B:51 Hex: #333333	R:255 G:255 B:255 Hex: #FFFFFF

CMB

Sub-brand

If your programme has a secondary colour palette, it can be placed opposite and used in conjunction with the Brand palette in accordance with your Sub-brand guidelines.

Note: CMB does not use a secondary palette as it uses the HSBC brand palette.

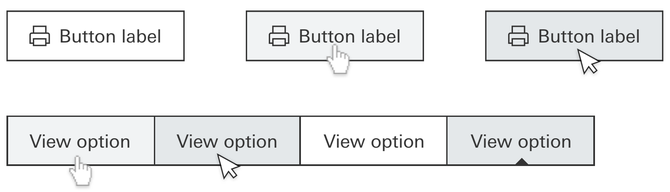
01 (Light Slate)	02 (Slate)	03 (Dark Slate)	04 (Corporate Slate)	05 (not in use)	06 (not in use)	07 (not in use)	08 (not in use)
R:77 G:100 B:116 Hex: #4D6474	R:62 G:80 B:93 Hex: #3E505D	R:37 G:48 B:56 Hex: #253038	R:29 G:38 B:56 Hex: #1D262C	R:– G:– B:– Hex: –	R:– G:– B:– Hex: –	R:– G:– B:– Hex: –	R:– G:– B:– Hex: –

Interaction Default

The Default theme can be applied to most interactive elements and patterns including buttons, dropdowns, tabs and tables. The default theme can be made up from the Brand or Sub-brand palette.

01	02	03	04	05	06	07
Aa	Aa	Aa	Aa	Aa	Aa	Aa
R:255 G:255 B:255 Hex: #FFFFFF	R:241 G:243 B:244 Hex: #F1F3F4	R:228 G:232 B:234 Hex: #E4E8EA	R:201 G:208 B:213 Hex: #C9D0D5	R:77 G:110 B:116 Hex: #4D6474	R:62 G:80 B:93 Hex: #3E505D	R:29 G:38 B:44 Hex: #1D262C

Examples of use

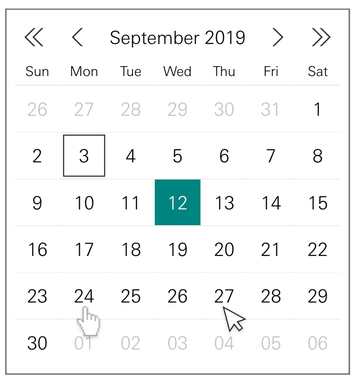


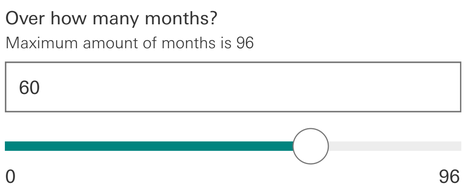
Interaction Defined

The Defined theme is restricted and used sparingly. The theme is currently only signed off for use with the progress tracker, date picker and slider. The is also a Defined theme button available for use only when the Defined theme has been applied to the component it appears with. The defined palette can be changed for Sub-brands if required.

01	02	03	04	05	06	07
Aa	Aa	Aa	Aa	Aa	Aa	Aa
R:255 G:255 B:255 Hex: #FFFFFF	R:235 G:245 B:245 Hex: #EBF5F5	R:217 G:237 B:236 Hex: #D9EDEC	R:178 G:218 B:216 Hex: #B2DAD8	R:0 G:94 B:89 Hex: #005E59	R:0 G:79 B:75 Hex: #004F4B	R:0 G:132 B:127 Hex: #00847F

Examples of use





Section will be updated to include standard image sizes to export for all components that use imagery and illustration

Photography

Image aspect ratio

We use the following aspect ratios to maintain consistency of images sizes across all breakpoints.

Ratio: 1:1

Ratio: 4:3

Ratio: 16:9

Ratio: 21:9

Ratio: 3:1

Ratio: 4:1

Content

The majority of images you will need may not be available from the Masterbrand or Sub brand libraries.

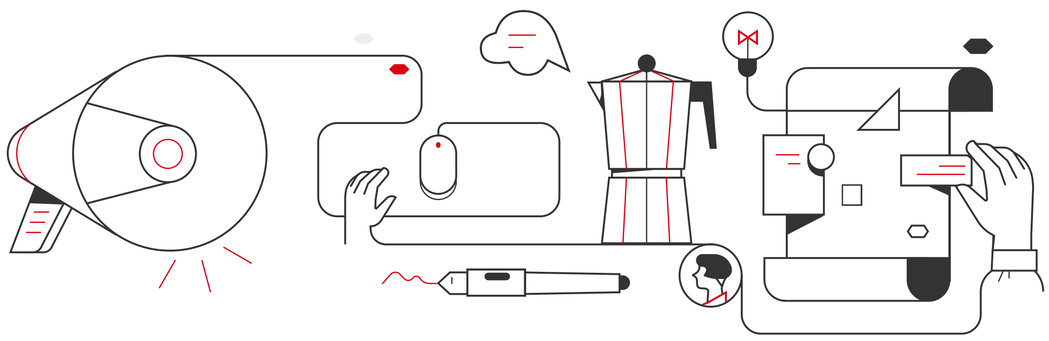
It is key to select images that are true to our brand and it’s tone; human, insightful, confident and with intelligent wit. Therefore our images are always natural, authentic and unstaged. Avoid clichés and aim to surprise by being unexpected, either in subject matter or framing.

Only use photography to support or complement a message. Never use to just fill a space without context or a take-out for our audience.

Illustration

Illustration system

We have an illustration toolkit to help HSBC designers who are tasked with an illustration-related job. It contains insights on the general thinking and process behind our Illustration System, handy advice, and guidance on how to approach illustration briefs, how to ideate and how to come up with symbolisms and ideas.



Reference library

We have a collection of illustrations created using the WPB Illustration Toolkit for reference when designing new illustrations. We suggest you check the library before you create any illustrations for reference and avoid duplicated works.

To download the WPB Illustration toolkit and WPB Illustration Reference Library please visit create.hsbc.

New Illustration Request

In addition to the resources above, the New Illustration Request allows designers to create and submit their own illustrations for review to ensure they meet HSBC standards.

To download New Illustration Request please visit create.hsbc.

Overview

HSBC has developed a set of icons for use within digital applications. Their form is simple and considered, using symmetry and consistency to create a unified set.

HSBC Icon Library

The most up-to-date icons can always be found on the Create.hsbc, however most of the icons can also be found in the latest HSBC Icon Library available with your toolkit.

Exporting icons from sketch and SVG repository

Do not export SVGs from the the HSBC Icon Library file or from artwork files. Download the SVGs' from the create.hsbc for sharing with development.

Icon sizes

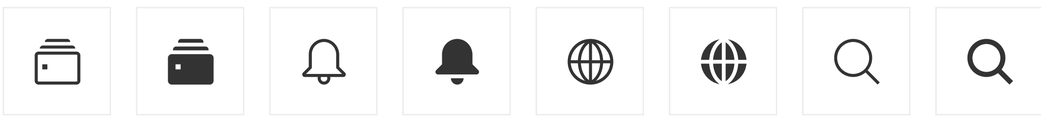
The following are our standard recommended sizes for responsive icons.

18x18px 24x24px 36x36px 48x48px

Default and active states

In their default state icons are depicted by simple lines. In their active state they have a solid fill. Not all icons have active states.

Icons should appear in the active state when a user interacts with or selects them – for example, if the user selects a tooltip or a section within the navigation. The only exceptions to this rule are covered in the Status and Notifications section.

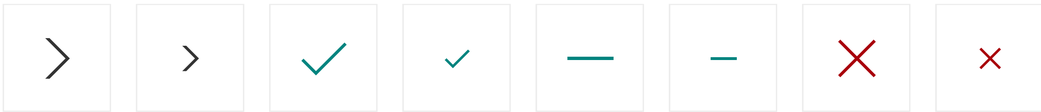


Default Active Default Active Default Active Default Active

Thicker weight icons

There are a few icon instances that need to be used smaller than the standard recommended sizes. These icons have been designed on the same 18x8px grid, however a thicker line weight of 1.8px has been applied to allow them to be scaled smaller without the line breaking up.

Examples include thicker versions for Chevrons and some status icons.



Default Thick Default Thick Default Thick Default Thick

Creating new icons

Always check the definitive list of icons on the Create.hsbc first before deciding if you need to create a new icon.

Do not change the context of use the existing icons were originally designed for, as this can create confusion for our customers.

There are guidelines with templates on the Create.hsbc to help you design new icons and how to follow the correct procedure to get them signed off prior to using them in your designs.

RAG colour use with icons

Notification icons are 'pre-coloured' to ensure that AA colour contrast is maintained against the background on which they appear. Rather than the standard single-colour icons, these can include two colours. For instance, the green success icon for use OnLight has a white tick, rather than a transparent one that shows the background colour. This ensures that when it's used in notification boxes which have a green tint in the background, it still passes the AA contrast requirements.

On RAG solid colours

On RAG tints

On dark backgrounds

On light backgrounds

RAG colour use with status

Some icons can use the RAG colour palette to convey a certain status, however the colour alone should not be used to indicate this. The icon status must make sense even if the RAG colour were not applied. Use of a label can help explain the context of the status.

Status Yes Status No Position Up Position Down

Inventory

Status and Notifications

Please see the previous page for the use of RAG colours with icons and backgrounds.

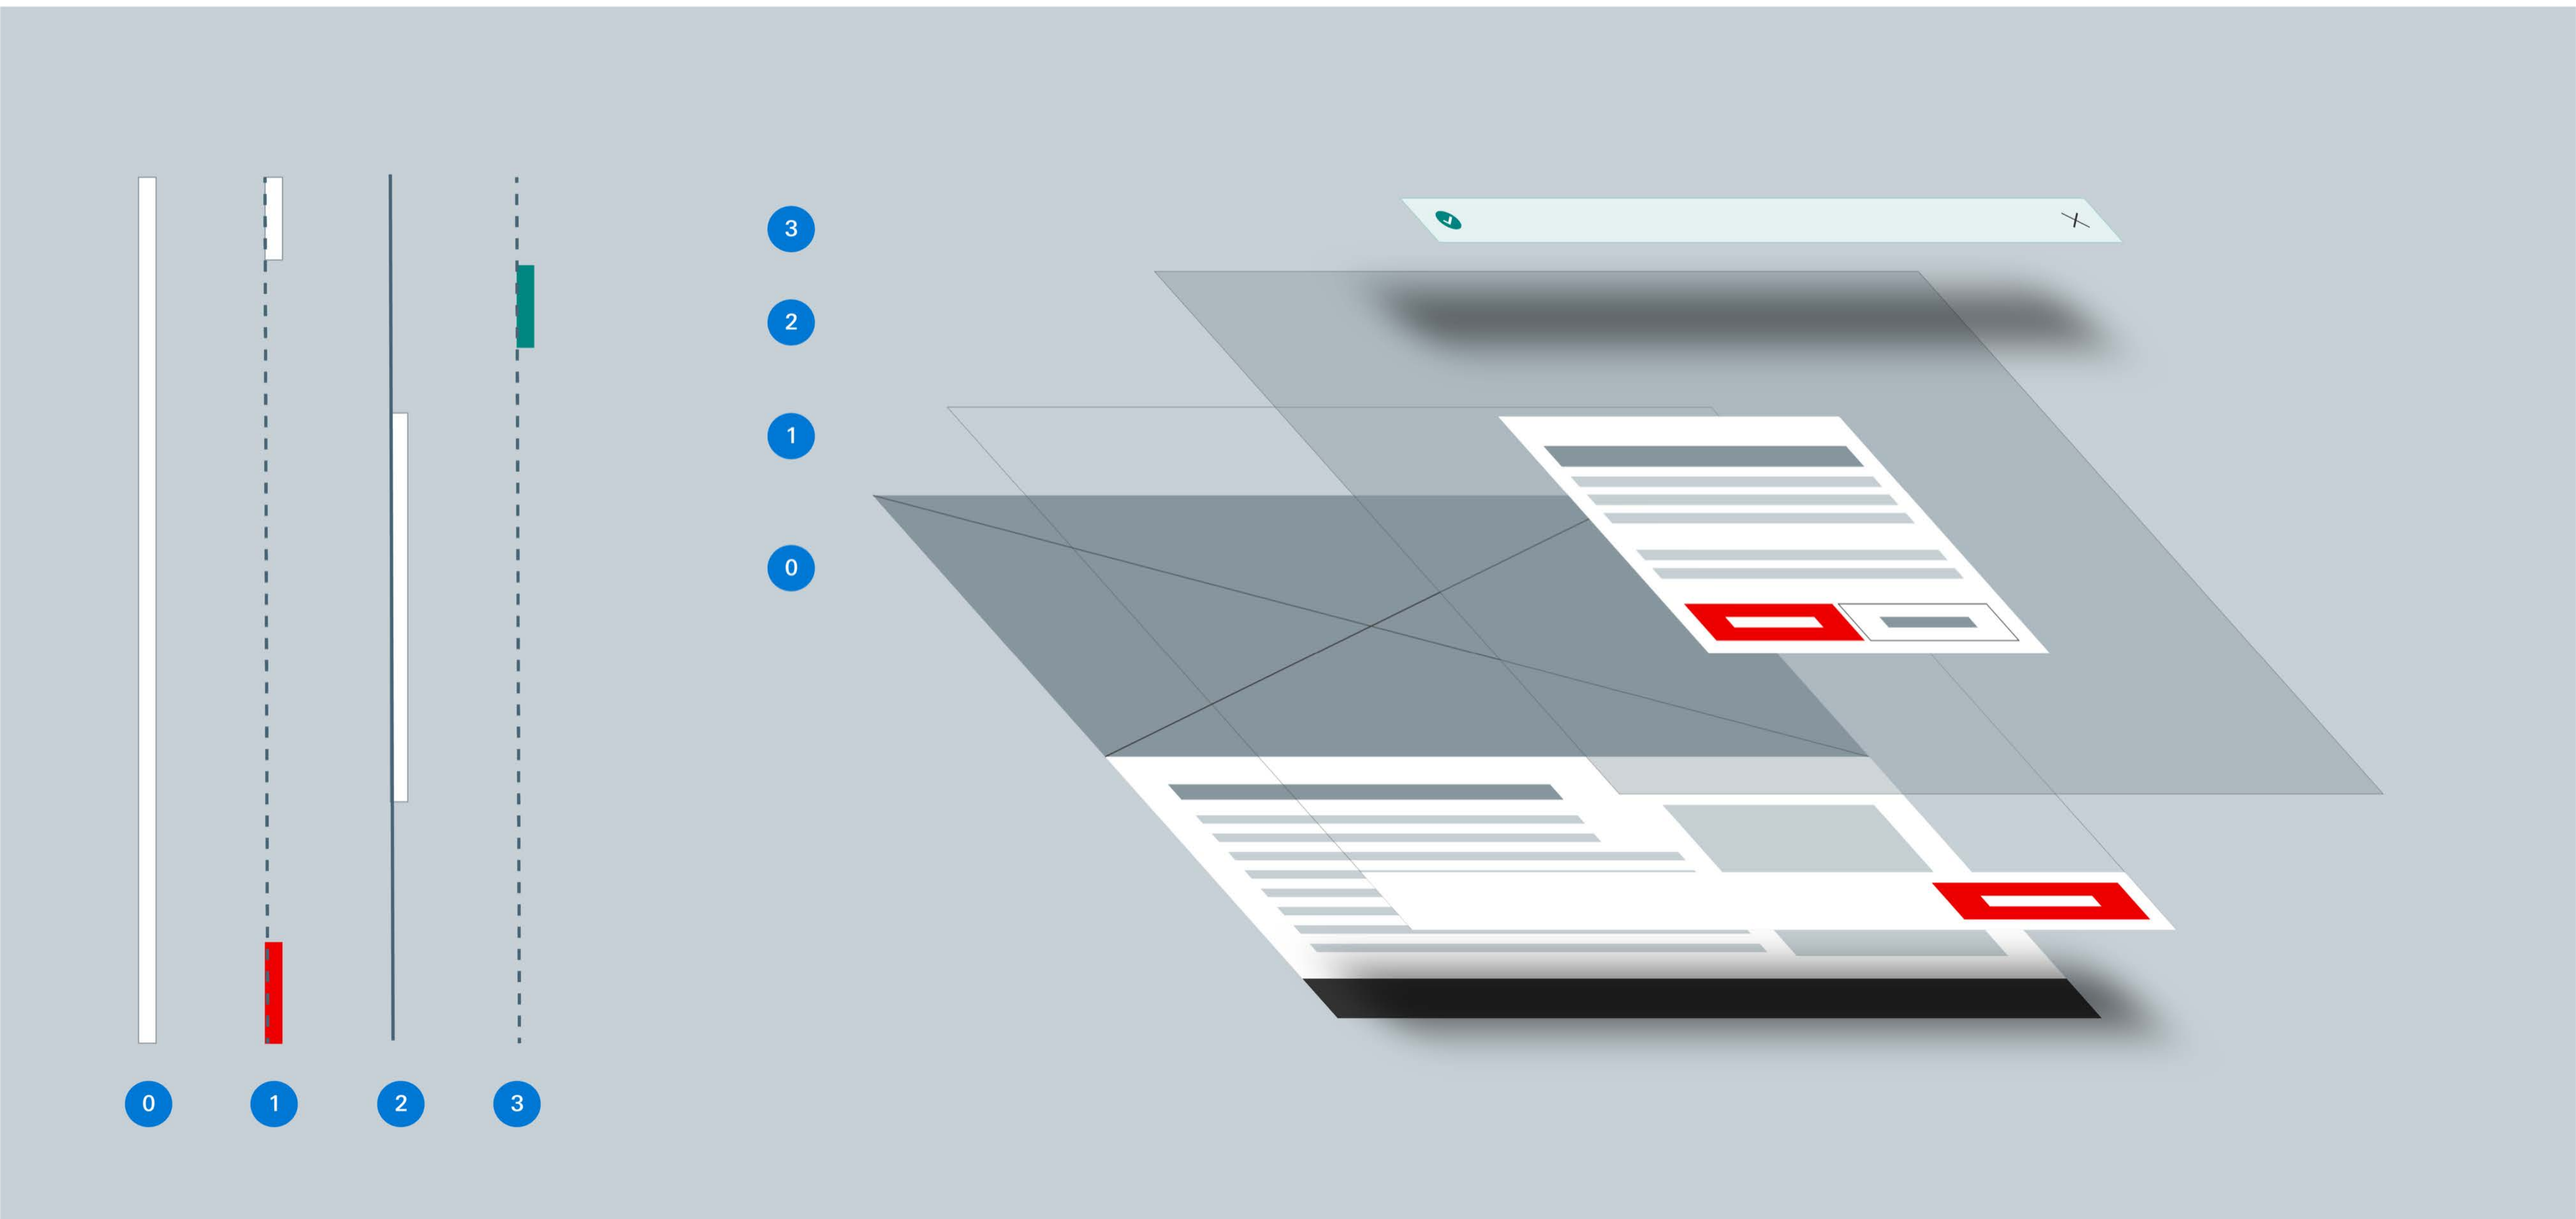
Elevation | 1 of 1

Visit create.hsbc for more information

Elevation is a visual indication of depth or distance. It's applied when elements or patterns sit on top of one another. To show different levels we use overlays and shadows.



Elevation defined in levels

0 - base content or core content (e.g. body copy, imagery, card, buttons)

1 - sticky content (e.g. top navigation or tooltip)

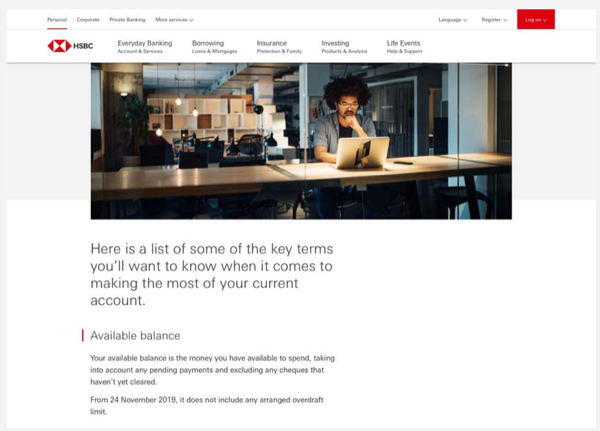
2 - modality (e.g. partial modals, dialogs)

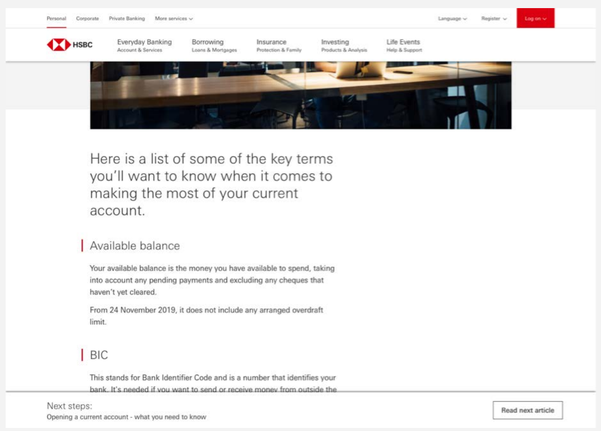
3 - notifications (e.g. snackbars)

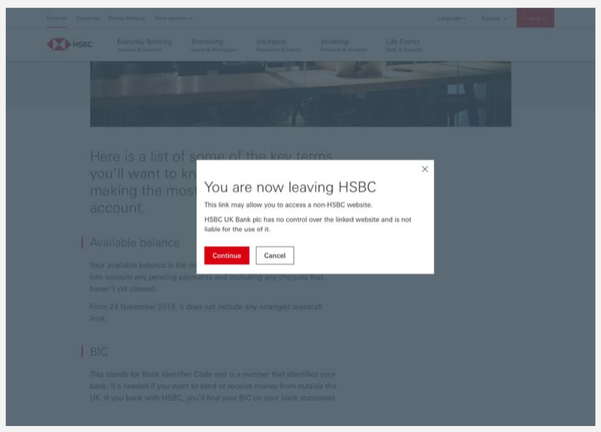
If an element or pattern is part of base content (ie. level 0), it will never have an elevation style applied. This is to enable us to effectively distinguish elements and patterns that sit above base content.

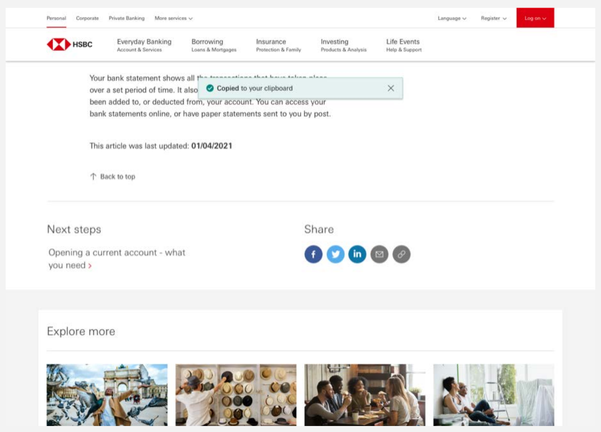
Elevation can be displayed as a state change when base content is scrolled underneath other elements/patterns. Elevation enables clear contrast between the lements and patterns that are stationery and those that are moving.

For more information on elevation usage please visit create.hsbc









Date and time

Internationally, input dates (e.g date picker, input fields) should follow the DD/MM/YYYY order. In the US format, months are displayed before days. Input dates should follow the MM/DD/YYYY order.

Output dates can be displayed in three different formats depending on the relevant context. Short, medium and long. Month abbreviation is limited to a maximum of three characters in all languages for 'short' and 'medium' formatted dates.

Input / output	International	US
Input	DD / MM / YYYY	MM / DD / YYYY
Short	17 Jan	Jan 17
Medium	17 Jan 2018	Jan 17 2018
Long	17 January 2018	January 17 2018

Time

All times to be displayed in 24 hour clock. Time zone must be indicated for any legally important timestamps. In tables, the time zone can be displayed in the column header, negating the need to display it next to each individual time.

Format	Use
16:45 (GMT)	Time relates to data which updates less than once per hour
16:45:26 (GMT)	Time relates to data which updates multiple time per hour and seconds data is available.

Timestamp

Format	Use
14 Jan 16:45 (GMT)	Time stamps can be of any combination of the options above but they should always follow the same order.

Currency and amounts

Monetary value is represented by currency symbols e.g. £ or by an internationally recognised 3 letter currency code, ISO 4217 e.g. GBP.

Currency symbol	Currency Code
£ 100	GBP 100

Positive and negative values

Positive and negative values are visual indications of increasing and decreasing

values. These can occur in transactions or balances. There are three ways to show positive and negative values in data sets: symbols, labels and icons. Text colour cannot be used to convey positive or negative value.

Symbol	Negative value	Positive value
	– 100.00	100.00
Labels	Debit	Credit
	100.00 DR	100.00 CR
Icons	Decrease	Increase
	▼ 1000.00	▲ 1000.00

Target size – mouse and touch

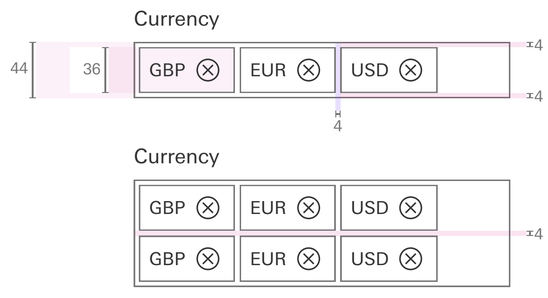
Ensure that target sizes are large enough for users to easily activate them, even if the user is accessing content on a small handheld touch screen device, has limited dexterity, or has trouble activating small targets for other reasons. For instance, mice and similar pointing devices can be hard to use for these users, and a larger target will help them activate the target.

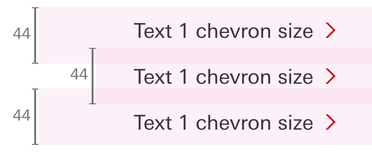
If there is more than one target on a screen that performs the same action, only one of the targets need to meet the target size of 44 by 44 CSS pixels.

Examples

If we cannot make the target area 44x44px, we should make the target area as large as possible but leave at least a target area space of 44px44px to help minimise the chance of misselection.

Example





Note: Although the text and chevron together are the actual link, there is enough space around the link to ensure another link is not actually pressed / clicked accidentally.

Inline

Hyperlinks within sentences or paragraphs of text do not need to to adhere to the 44x44px target area. However our standard text chevron links should have adequate space when stacked above and below to ensure that users on touch screens do not accidentally touch any adjacent links.

Examples

At HSBC, we believe that how we do business is as important as what we do. We want to achieve good results in a way that treats our customers fairly and helps to strengthen communities and ensure a properly functioning financial system. Our values are central to achieving these aims.

320 Viewport

This artboard is intended for testing components at the smallest size at the 320 viewport.

Margins: 16px

Gutters: 16px

Columns: 9px

TScale:1

RScale:1

360 Viewport

This artboard has been designed at the most common size for mobile at 360px wide.

This size also allows us to easily prototype designs on android and for iOS, and to use the latest native components within our designs. For iOS the artboard can be increased to 375px wide with the content width staying the same. Although the margins will be wider than the the actual coded version, this should not affect the user experience whilst testing.

Classic Credit Card

Whether you need to build or improve your credit rating, the Classic Credit Card could be right for you.

Credit is subject to status, affordability and applicable terms and conditions. Did you know you can check if you're likely to be accepted?

Representative example

Representative APR

29.9% (variable)

Purchase rate p.a

29.9% (variable)

Assumed credit limit

£1000%

How to apply

Benefits

With the HSBC Classic Credit Card you'll get:

- No Annual fee
- Up to £1,000 credit available
- Build or improve your credit rating
  This card could help you build or your credit score over time, if managed well. Your credit score could be harmed if you don't make payments on time and stay within your credit limit.
- Enjoy global discounts
  Earn cashback from your favourite shopping brands with Visa Offers, plus get instant discounts from well-known brands around the world with our home&away rewards programme. For all offers check out the home&away website.
- Make contactless transactions
  Your card is contactless and you can add it to Apple Pay, Google Pay and Samsung Pay.
- Manage your card online
  Online banking is a convenient way to manage your card. It lets you check your credit card balance, make payments and stay in control.

Eligibility

To be eligible for an HSBC Classic Credit Card you need to:

- Have an annual income/pension before tax of £8,500 or more
- Be a resident of the UK*
- Be over 18, and not hold an HSBC Basic Bank Account

If you foresee any changes in circumstances that may affect your ability to repay the credit card you are applying for, for example a change in your income or outgoings, a change to your employment situation or you are a temporary or zero hours contract worker, please apply by telephone or branch

*Channel Islands and Isle of Man customers are not eligible to apply online. Please visit your local branch to apply.

Types

Accordion S5

The S5 version has the same trigger size for both RScale:1+2, however the tray padding changes across the responsive scales

Accordion S4

S4 refers to the trigger font size and this changes scale between RScale:1 and RScale:2. Tray padding also changes at this point.

Tray content

The 'open' tray at full width can accomodate all standard components and can use the page grid for layout.

If the accordion is not at full width, for example only 8 columns, the content has to be fluid and span the width of the accordion in a single column group.

Sketch note

The last accordion in the stack uses 'Accordion / Divider' symbol to complete the the pattern.

Specs – Layout

Full width accordion content options

The container space should be built to accomodate any standard AEM component that sits on the grid. This includes multi-column components. These components should retain their normal responsive behaviour within the accordion.

Text Container component example

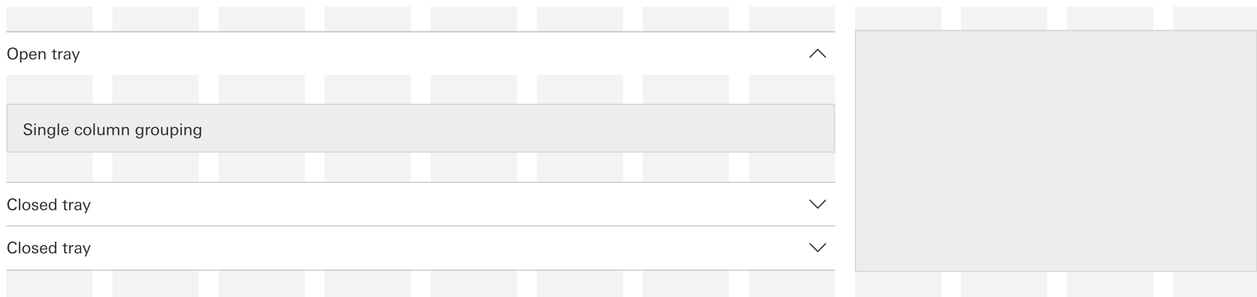
If the Text Component was inserted into the content tray it would follow the normal responsive behavour across the breakpoints within the accordion. The normal responsive behaviour for this breakpoint shown is span 8 columns. At the 320 extra small breakpoint it would span 12 columns. Please see the Text container component for more details.

Examples shown on 1280 breakpoint with full width accordion

Accordion within a column grouping

Accordions can be placed withing a column grouping. The accordion is flush to the edges of the column grouping and follows the responsive behaviour of the column grouping.

Examples shown on 1280 (desktop) within a two thirds / third column grouping



Interaction behaviour

The default behaviour for accordions is to allow users to control the interaction. We do not open an close an accordion tray when a user selects a different accordion in the group. Automatic closing of accordions can lead to the page jumping around which is very disorientating particularly on the smaller viewports.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Accordion

Accordions are used reduce clutter on the page, helping users stay focussed and reducing cognitive load. They are useful when a page is content-heavy or has to cover a range of user requirements (eg finding an answer to an FAQ).

Tray content

The 'open' tray at full width can accomodate all standard components and can use the page grid for layout.

If the accordion is not at full width, for example only 8 columns, the content has to be fluid and span the width of the accordion in a single column group.

Sketch note

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Label

Design note

Although some buttons are the same OnLight and OnDark, it is important to use the correct version in case any states change in the future.

Primary button

The Primary button is used to show the main purpose of the page. You can only use one of these per page.

Secondary button

The Secondary button can be used to call out or can give prominence to a secondary feature. It is never used in conjunction with a Primary button adjacent.

Tertiary button

The default style for most page buttons and you can use as many as required. It can also be used in conjunction with a Primary button. The default and disabled states have no fill.

Types

Standard card

The layout of card content can be varied depending on the context and placement within a page. Shown opposite are examples with some of these variations included.

Picture option

The standard image ratio for cards is 16:9. If a different image ratio is to be used consider how this affects the consistency and hierarchy of the page in which it appears, and any other pages that might re-use the card instance.

Text only option

The text card is a variation of the picture card. The main difference is the text card has a border at the top to 'close' the card rather than the picture.

Sketch note

The card symbol has a spacer graphic to help postion the content to the correct padding. There are options for RS:1 and RS:2 in the overrides.

For pictures that have very light or white backgrounds, a border style can be applied by adding the symbol 'Card / Image border'.

The tinted background if needed can be applied using the overrides panel.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Checkboxes are used to allow users to select one or multiple options in a list, or to toggle a single option true or false (e.g. when subscribing to a newsletter).

Sketch note

Checkboxes can be inserted separately via the library but an option with the label is also available in 'Form / Checkbox / Layout + Label'.

Types

Standard – Default

Date pickers are used when the user needs to find or choose a date that they are not certain about without the visibility of a calendar to assist them (e.g. to filter transactions made while on holiday).

Known dates (e.g. date of birth or passport expiry dates) that don't depend on the visibility of a calendar use three field text input (day, month, year) documented in the text inputs guidelines.

The date can be input manually or selected from the date picker panel. The Dropdown Input uses masking to help with correct formatting.

For the extra small breakpoint the calendar is displayed in a modal window.

Sketch note

Months and days can all be changed in the overrides, as can be their states. Opposite are 'ready made' examples. However you can recreate the Date Picker from individual elements from the library.

Manual date input

Date input

Please select a date

For example: DD / MM / YYYY

The input follows the same styling and interactions as a standard text and icon input field.

Date input mask

Please select a date

For example: DD / MM / YYYY

25/12/1970

The date is formatted with an input mask.

Error

Please select a date

For example: DD / MM / YYYY

25/1221/19

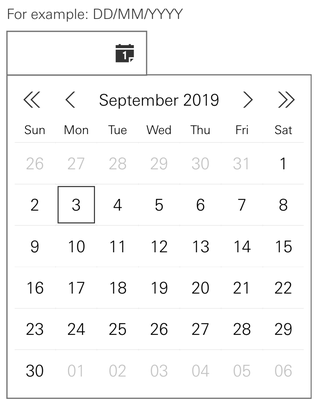
Error message appears here

Date picker

Calendar icon

Please select a date

For example: DD/MM/YYYY

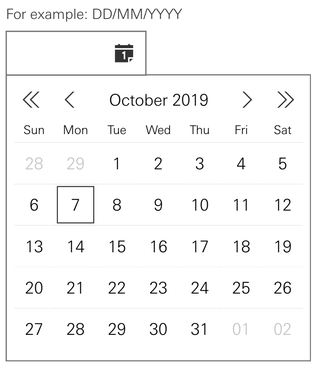


The date picker appears when the calendar icon is pressed.

Calendar weeks

Please select a date

For example: DD/MM/YYYY

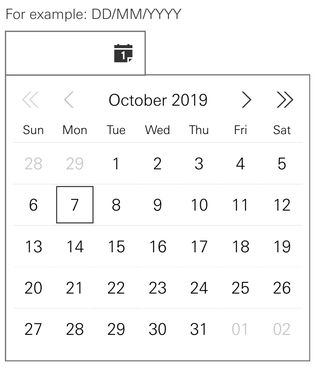


The picker expands or contracts in height depending on the number of rows in the month.

Calendar months disabled

Please select a date

For example: DD/MM/YYYY



The picker can be disabled from showing months that are unavailable by disabling the chevrons.

Date selected

Please select a date

For example: DD/MM/YYYY

25/12/1970

On selecting a date the picker closes and the input is updated with the selected formatted date. The date can still be manually edited afterwards if desired.

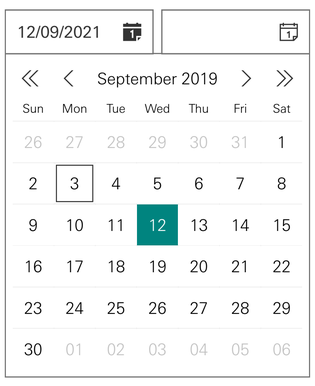
Date range picker

Default

Date from | Date to

'From' date selected

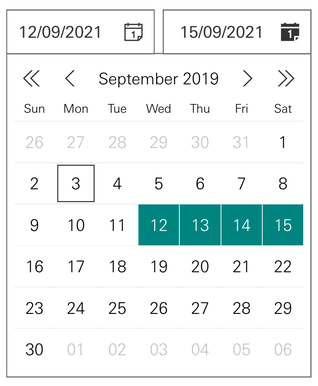
Date from: 12/09/2021 | Date to



The date range picker appears when one calendar icon is pressed. The 'from' date is the first date selected and the input fiield is updated.

'To' date selected

Date from: 12/09/2021 | Date to: 15/09/2021



The second date selected is the 'to' date and the range of dates inbetween is market as pressed states.

Date range selected

Date from: 12/09/2021 | Date to: 15/09/2021

On selecting the 'to' date the picker closes and the input is updated with the selected formatted dates. The dates can still be manually edited afterwards if desired.

Date range picker - 'Select last' option

Optional panel - hover

Date from | Date to

An optional panel with 'last' days can be added as an extension to the calendar view. Positioning depends on the availability of space.

Optional panel - selected

Date from: 12/09/2021 | Date to: 21/09/2021

When pressed, the chosen number of 'last' days will be highlighted and the input fields updated.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Date picker - 40px

Date pickers are used when the user needs to find or choose a date that they are not certain about without the visibility of a calendar to assist them (e.g. to filter transactions made while on holiday).

Known dates (e.g. date of birth or passport expiry dates) that don't depend on the visibility of a calendar use three field text input (day, month, year) documented in the text inputs guidelines.

The date can be input manually or selected from the date picker panel. The Dropdown Input uses masking to help with correct formatting.

Sketch note

Months and days can all be changed in the overrides, as can be their states. Opposite are 'ready made' examples. However you can recreate the Date Picker from individual elements from the library.

Manual date input

Date input

Please select a date
For example: DD/MM/YYYY

The input follows the same styling and interactions as a standard text and icon input field.

Date input mask

Please select a date
For example: DD/MM/YYYY

21/02/2021

The date is formatted with an input mask.

Error

Please select a date
For example: DD/MM/YYYY

21/0202/2021

Error message appears here

Date picker

Calendar icon

Please select a date
For example: DD/MM/YYYY

September 2021

Sun	Mon	Tue	Wed	Thu	Fri	Sat
26	27	28	29	30	31	1
2	3	4	5	6	7	8
9	10	11	33	13	14	15
16	17	18	19	20	21	22
23	24	25	26	27	28	29
30	01	02	03	04	05	06

The date picker appears when the calendar icon is pressed.

Calendar weeks

Please select a date
For example: DD/MM/YYYY

12/09/2021

February 2021

Sun	Mon	Tue	Wed	Thu	Fri	Sat
26	27	28	29	30	31	1

Types

Sortable lists

Drag and drop allows a user to physically drag user interface elements from one place to another.

It is commonly used to re-order items in a list. An item can be physically moved up and down the list.

Variations

There are variations of Drag & Drop that would allow moving modules on a dashboard or drag and dropping files into a drop zone to upload.

Drag handles

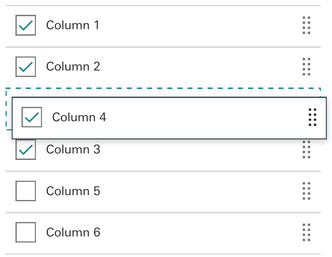
The presence of drag handles largely depends on context. For components that don't typically involve drag and drop, a drag handle helps users discover drag and drop as an available action.

Default

Hover

Grab

Drop



The drop zone highlights when the list item is moved more than 50% away from the original position.

Types

Non-Native

Only use Non-native dropdowns if a native pattern can not be used in it's place. The former tends to be used around tables to ensure consistency of interaction and presentation between different dropdowns with different functionality.

Standard

Selecting anywhere within the field opens the native dropdown list, allowing the user to scroll the list of options or use the up/down arrows to navigate through the options. Selecting one closes the dropdown and displays the selected option in the field container. Changing focus by selecting anywhere outside it or pressing the escape key will return the dropdown to its default state.

Filtered

Once in focus, filterable dropdowns will let users filter the list to show only the options that match the text string they enter into the field, starting from the first character. A completion string will be added to the end of their input, preventing them from submitting a value that isn't available on the menu. Closing the dropdown without selecting an option will return it to its default state, clearing the input.

Non-native Filtered

Trigger

Field label title

Please select an option

The Filtered dropdown has the same styled trigger as the standard dropdown.

Active

Field label title

|
Andorra
Angola
Antigua and Barbuda
Anguilla
Bosnia

On selection of the trigger the text input cursor is active to let users input a value. The select menu is also shown in it's default alpha / numeric state. If the list is long then it has a scroll bar to navigate the select menu manually if desired.

Active filtering

Field label title

U|
United Kingdom
United States
United Arab Emirates
United States Virgin Islands
Uruguay

After the user has input the first character a list of suitable matches from the select list is displayed. The list no longer displays all the items.

The most suitable option appears at the top of the list and has the 'Selected' state. If the use presses the return key it will select this option by default.

Active filtering

Field label title

Uni|
United Kingdom
United States
United Arab Emirates
United States Virgin Islands

As the user continues to input more characters the list will show fewer more relevant results.

Active filtering states

Field label title

United|
United Kingdom
United States
United Arab Emirates
United States Virgin Islands

The user can manually select from the results, or use the arrow keys to navigate the select list and return a value.

No results whilst typing

Field label title

Narnia
No matching results found.

As the user continues to input more characters the list will show fewer more relevant results.

Submitted error

Field label title

Narnia

Error message appears here

If the user types return and no permissible value is selected a error is generated. Selecting the text delete button would return the select menu back to the default full list.

Focus out with no selection

Field label title

Please select an option

If the user focuses outside the select menu the dropdown returns to the original state before the user interacted with it

Submit button

Using a submit button

Dropdowns that are used as navigation or take you to another screen should have a separate 'Submit' button to ensure the best accessible approach.

Dropdown trigger with button

Field label title

Please select an option | Submit

Select the button hierarchy based on the importance and context of the action within the page

Field label title

Please select an option | Submit

Field label title

Please select an option | Submit

Using a primary button would only be acceptable on a page where this was the primary action with no other primary buttons on the page.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Compact Desktop - Dropdown Non-native 40px | 1 of 3

Types

Non-Native

Only use Non-native dropdowns if a native pattern can not be used in it's place. The former tends to be used around tables to ensure consistency of interaction and presentation between different dropdowns with different functionality.

Standard

Selecting anywhere within the field opens the native dropdown list, allowing the user to scroll the list of options or use the up/down arrows to navigate through the options. Selecting one closes the dropdown and displays the selected option in the field container. Changing focus by selecting anywhere outside it or pressing the escape key will return the dropdown to its default state.

Filtered

Once in focus, filterable dropdowns will let users filter the list to show only the options that match the text string they enter into the field, starting from the first character. A completion string will be added to the end of their input, preventing them from submitting a value that isn't available on the menu. Closing the dropdown without selecting an option will return it to its default state, clearing the input.

Compact Desktop - Dropdown Variations | 1 of 1

Types

Double dropdown

A double dropdown can be used to save space (see filters) and to achieve a more compact appearance of form fields.

Interactions and states follow the same format as a standard drop down.

Account selector

Account selector dropdowns display an overview of the basic account features, i.e. name, balance, number, currency ect. On the basis of these criteria, the user can pre-screen his account selection.

Interactions and states follow the same format as a standard drop down.

Multi-select menu

Multi-select menus allow the user to select more than one value in the same dropdown, (i.e more than one currency).

Interactions and states follow the same format as a standard drop down menu.

Double

Trigger

Account selector

Trigger

The amount of values listed on the account selector can vary. Sketch note: To alter the number of value fields detach the symbol from the library.

Multi-select menu

No component

There is no responsive component currently available, please discuss with your design lead if one is required and follow the 'New Pattern Request' process.

Types

Filter

The filter expand functionality allows for a container tray to open on selection and reveal a set of filters. The filters can be dynamically applied or applied with a submit button depending on requirements and context.

When filters have been applied and the container tray is closed, a secondary 'Clear all filters' link is displayed with the number of filters applied represented as a number. This helps users undestand filters have been applied and also allows them to clear the filters without opening the container tray again.

Responsive and typographic scales to use with ‘Responsive' components only.

Spacing – fixed and responsive

Spacing is measured to the bounding box of the text. ‘F’ stands for fixed and ‘R’ stands for responsive. Please see the Spacing section for more details.

Please see individual specs for elements including:

Text Inputs, Text Areas, Check boxes, Radio Buttons, Dropdowns.

Responsive Scale (RS: / RScale:)

	RS:1 BP 320	RS:2 BP 960	RS:3 BP 1600+
R0	0	+4 = 4	+8 = 8
R1	4	+4 = 8	+8 = 12
R2	8	+4 = 12	+8 = 16
R3	12	+4 = 16	+8 = 20
R4	16	+4 = 20	+8 = 24
R5	20	+4 = 24	+8 = 28
R6	24	+4 = 28	+8 = 32
R7	28	+4 = 32	+8 = 36
R8	32	+4 = 36	+8 = 40
R9	36	+4 = 40	+8 = 48
R10	40	+8 = 48	+16 = 56
R11	44	+8 = 52	+16 = 60
R12	48	+8 = 56	+16 = 64

Note: RScale:3 is only used for marketing campaign sites

Typographic scale

The typographic scale changes at the same breakpoints as the spacing scale

Typographic Scale (TS: / TScale:)

Key: type size / line space (para space)

	TS:1 BP 320	TS:2 BP 960	TS:3 BP 1600+
S1	33 / 40 (20)	44 / 50 (25)	57 / 66 (33)
S2	28 / 36 (18)	35 / 42 (21)	43 / 52 (26)
S3	23 / 30 (15)	28 / 36 (18)	32 / 42 (21)
S4	19 / 27 (14)	22 / 31 (16)	24 / 31 (16)
S5	16 / 24 (12)	16 / 24 (12)	16 / 24 (12)
S6	14 / 20 (10)	14 / 20 (10)	14 / 20 (10)
S7	12 / 16 (8)	12 / 16 (8)	12 / 16 (8)

Note: TScale:3 is only used for marketing campaign sites

Form content disclaimer

All content is only placeholder text to demonstrate patterns. Please check with your content team for correct copy.

Element spacing

Form snippets do not have vertical responsive spacing within themselves. A form snippet can be a simple field label and input field to a more complex pattern for example conditional radio fields.

Spacing within snippets follows some basic layout rules shown below.

Compact Desktop - Form snippets | 1 of 1

For use on fixed desktop 960+ with 'Compact desktop' components only.

If you require your design to work on smaller touch devices, use the equivalent 'Responsive' components and foundations for mobile breakpoints.

Spacing

Spacing is measured to the bounding box of the text. Please see individual specs for elements including:

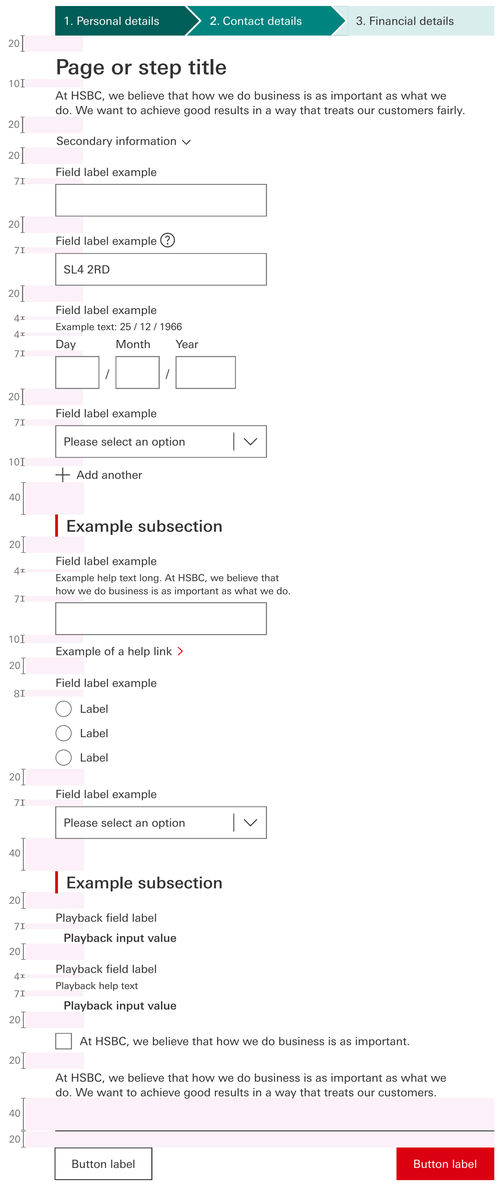
Text Inputs, Text Areas, Check boxes, Radio Buttons, Dropdowns.

Typographic Scale

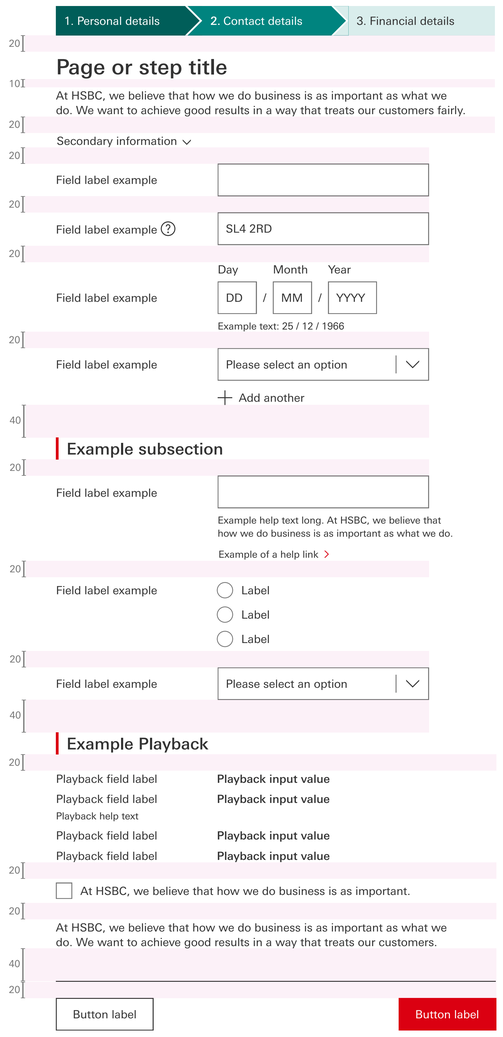
Key: type size / line space (para space)

	Compact desktop Desktop 960+
S1	26 / 34 (17)
S2	20 / 26 (13)
S3	18 / 23 (12)
S4	16 / 21 (11)
S5	14 / 18 (9)
S6	12 / 16 (8)

Compact desktop components and typescale top aligned



Compact desktop components and typescale left aligned



Types

Unordered

Unordered lists are used to summarise information, using standard circular HTML bullet points.

Ordered

Ordered lists are used to show a set of sequential points, using numbers, capital letters or roman numerals to clearly indicate their order.

Nested

Nested lists are used sparingly, as they introduce visual complexity and make the list harder to scan. They are often used for legal copy and should follow the numbering conventions provided by the legal team (eg using lower case letters or numerals).

Custom

Custom lists are used to draw attention to a series of summarised points (eg account benefits) and can include icons and additional subtext for each item.

Custom links

The Custom links list has more space between each item to allow for the target area of 44px. The links behave the same way as the standard Icon Links (please see the 'Icon Links' section for details).

Unordered: Size:S5

You can use HSBC My Investment if you're:

- at least 18 years old
- not a US national/citizen/resident (eg a US passport or green card holder)
- an HSBC current account customer

  This card could help you build or improve your credit score over time, if managed well.
- currently in the UK and a UK resident

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Chevron Links

Chevron links provide clear signposting for users, helping them to navigate the site.

The links take the user to a new or previous page. They should not be used to link within the same page.

Design note

For S1 – S4 sizes the chevron is equal to the x-height of the font and is placed on the baseline. The distance from the text is equal to half the height of the chevron. For example the height S1 'x' height is 22px, so the chevron is 22px high and spaced from the text by 11px.

For sizes S5 – S7 the chevron is equal to the cap-height of the font and is placed on the baseline. The distance from the text is equal to half the height of the chevron. For example the cap height foir S5 is 12px, so the chevron height is 12px high and spaced from the text by 6px.

Sketch library symbol note

The standard chevron links on white are available as symbols from the library (or copy and paste from below). The symbols only work for one line. If you need a symbol to work over two lines or more, copy a version from these pages, or alternatively import the correct sized symbol, then brake it apart to move the chevron to the last line. These symbols have overrides to allow for on dark application.

Line wrap

Line wrap for chevron link

Example link over two lines or more ›

The chevron follows the last word over to the next line when text wraps.

Line wrap for back link

‹ Example link over two lines or more

The chevron stays in place when the text wraps onto two lines. The text aligns left with the beginning of the sentence.

✕ Line wrap applied wrongly!

Example link over two lines or more ›

The chevron should never break onto the next line by itself, it always carries over with the last word with the link

✕ Line wrap applied wrongly

Example link over two ›
lines or more

The chveron should always be placed after the last word.

Target area

Spacing for lists of links

Example link one ›
Example link two ›
Example link three ›

Example link one ›
Example link two ›
Example link three ›

44
44
44

When links appear in lists it is best practice to allow a space of 44px for click or touch interaction. The focus area in the diagram above shows that the space for target area can be 'shared' so long as it doesn't overlap the actual physical target area.

Tab focus

Example link ›

HSBC uses the default browser style to highlight focus states in addition to any custom designed focused state.

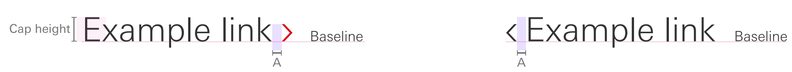
Specifications – Structure cont.

Dimensions

S1-S4 link sizing and spacing



The chevron aligns to the baseline of the font. The space value for A is half the height of the chevron.

For S1 – S4 sizes the chevron is equal to the x-height of the font and is placed on the baseline. The distance from the text is equal to half the height of the chevron. For example the height S1 'x' height is 22px, so the chevron is 22px high and spaced from the text by 11px.

S5-S7 link sizing and spacing

The chevron aligns to the baseline of the font. The space value for A is half the height of the chevron.

For sizes S5 – S7 the chevron is equal to the cap-height of the font and is placed on the baseline. The distance from the text is equal to half the height of the chevron. For example the cap height foir S5 is 12px, so the chevron height is 12px high and spaced from the text by 6px.

Sizes and spacing by font size

Icon sizing

The chevrons used for the links are as follows:

Chevron_right_thick.SVG Chevron_left_thick.SVG

*The icons are sized by the SVG canvas including any 'blank' space within them. The chevron 'thick' icons differ from standard icons in that they are cropped to fit the chevron rather than square to make it easier to place alongside text.

The 'size' referenced in the chart refers to the longest edge of the chevron, whether it's the height for a chevron pointing left or right, or for width of a chevron pointing up or down.

The line weight is also thicker than a standard icon to allow for them to be used at sizes below 18px.

Size 1 (S1)	TScale:1	TScale:2	TScale:3
Chevron size (px)*	17	22	28
Chevron space (px)	8	11	14

Size 2 (S2)	TScale:1	TScale:2	TScale:3
Chevron size (px)*	14	18	22
Chevron space (px)	7	9	11

Size 3 (S3) Light	TScale:1	TScale:2	TScale:3
Chevron size (px)*	12	14	16
Chevron space (px)	6	7	8

Size 4 (S4) Light	TScale:1	TScale:2	TScale:3

Chevron space (px)	4	4	4

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Chevron links

Chevron links provide clear signposting for users, helping them to navigate the site.

The links take the user to a new or previous page. They should not be used to link within the same page.

Design note

For S1 – S6 sizes the chevron is equal to the Cap-height of the font and is placed on the baseline.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Inline links

Links displayed within a text block or sentence can often be reflowed based on the screen width available. Since targets can appear anywhere on the line, the size cannot be larger than the available text and spacing between the sentences or paragraphs, otherwise the targets could overlap. It is for this reason targets which are contained within one or more sentences are excluded from the target size requirements.

Example

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Praesent in eros libero. Curabitur cursus ex quis. Donec blandit inline link example commodo imperdiet. Ut in viverra magna. Nulla porttitor, lectus in laoreet fringilla, arcu eros viverra urna, id inline 'inline link example rollover' nec sem. Nam turpis libero, iaculis non justo ac, rhoncus posuere felis.

Nulla porttitor, lectus in laoreet fringilla, arcu inline link example.

Opening a new tab or new window

Links that open a new tab or window should have an icon added at the end of the text as part of the link to make it clear to all users this is the expected behaviour. For screen reader users this icon should be wrapped or a child of the link element (See specs).

Some exceptions to this rule are:

Actions that typically and implicity indicate opening a new window e.g. a download link.

Links that trigger a modal, rather than a new window.

Example

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Praesent in eros libero. Curabitur cursus ex quis. Donec blandit inline link example commodo imperdiet. Ut in viverra magna. Nulla porttitor, lectus in laoreet fringilla, arcu eros viverra urna, id faucibus enim metus nec sem. Nam turpis libero, iaculis non justo ac, rhoncus posuere felis.

Nulla porttitor, lectus in laoreet fringilla, arcu inline link example

Anchor links

Anchor links should be used only when page content makes it absolutley neccessary. Preferably content should be short and well sectioned to avoid having to use anchor links. It's also advisable to use a standard preceding phrase to indicate anchor links such as 'In this page:' Adding an icon also gives a visual clue.

Bg: #3E505D

Close icon

Icon SVG: 'Close' #333333

Specs – Structure

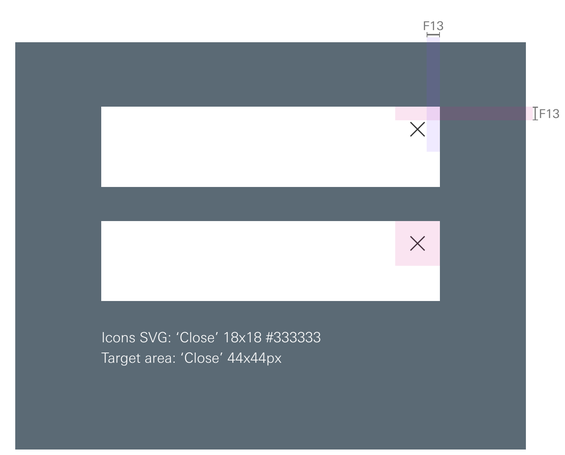
Configuration

Modal margins

Viewport	Side margins (min)	Top / bottom margins (min)
Extra Small 320 (px)	8	44
Small 480 (px)	16	44
Medium Small 760 (px)	16	44
Medium 960 (px)	20	44
Large 1280 (px)	20	44
Extra Large 1600 (px)	20	44

Modal padding

	RScale:1	RScale:2
Top (px)	44	44
Right (px)	16	20
Bottom (px)	20	24
Left (px)	16	20



Custom padding and max width

It should be possible to disable the padding for the sides and the bottom, for instance to be able to fit a date picker within the model on the smaller breakpoints.

It should also be able to be able to select a custom max width for items. Please see Date Picker for example.

Closing the modal

The user can close the modal by pressing the close icon 'X' or the outside of the modal.

Behaviour

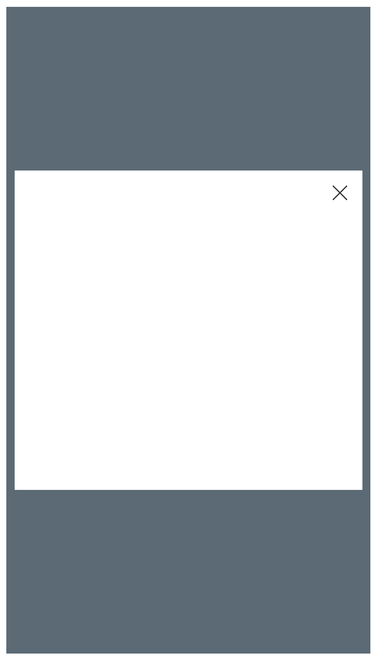
Scrolling

The preferred behaviour for modals is if the content is too long to fit on screen then the whole modal layer scrolls.

While the modal is open, the page content beneath is non interactive and does not scroll.

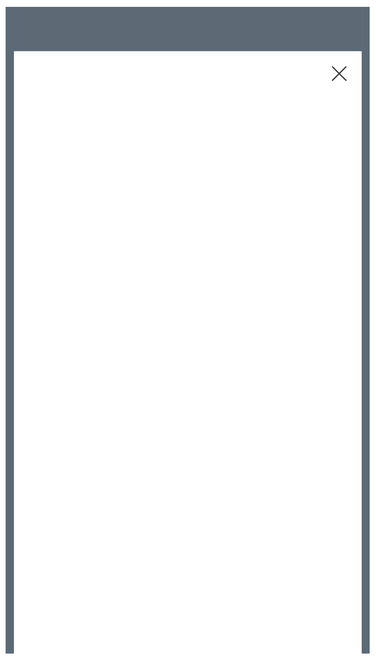
All breakpoints

Non Scrolling



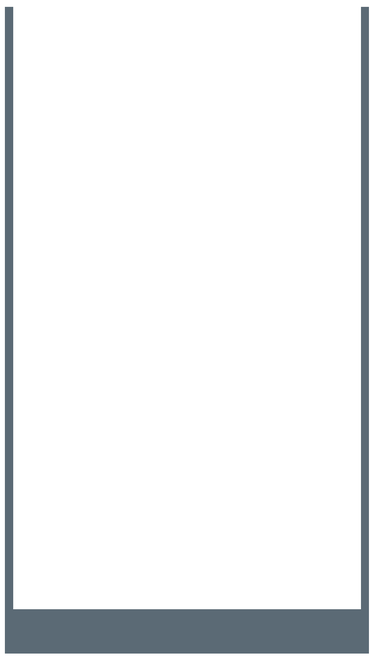
The modal floats in the centre vertically.

Scrolling default position



Default scroll position is 44px from the top of the browser to reinforce understanding that its a modal. Page uses the native OS scroll bar.

Scroll limit



The modal has 44px of space at the bottom, which can allow the user to 'Tap' out if they need to without having to scroll back to the top.

Max width

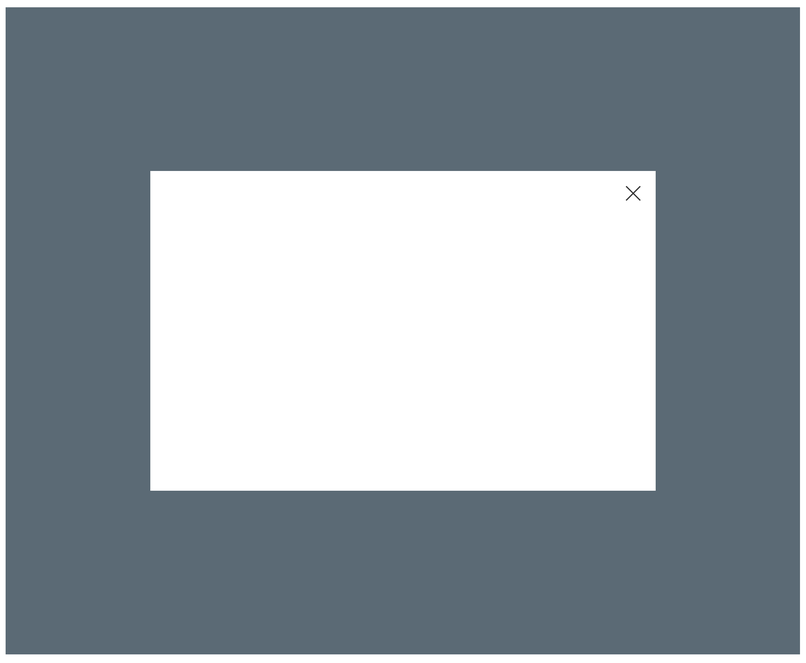
Modals are set to a maximum size and are fluid in nature. This allows all modals to reduce from the in size to fit our smallest breakpoint

Dialog modal example

Breakpoint 320

The Dialog modal (max width 500px) collapses to smaller mobile viewport.

Breakpoint 760



The Dialog modal expanded to its full width of 500px.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

The modal disables the main window but keeps it visible with the browser window. Users must close the modal window before they can return to the main journey.

If the window resizes, the modal width resizes aligning to the grid.

Dialog

Fluid with min height 300px

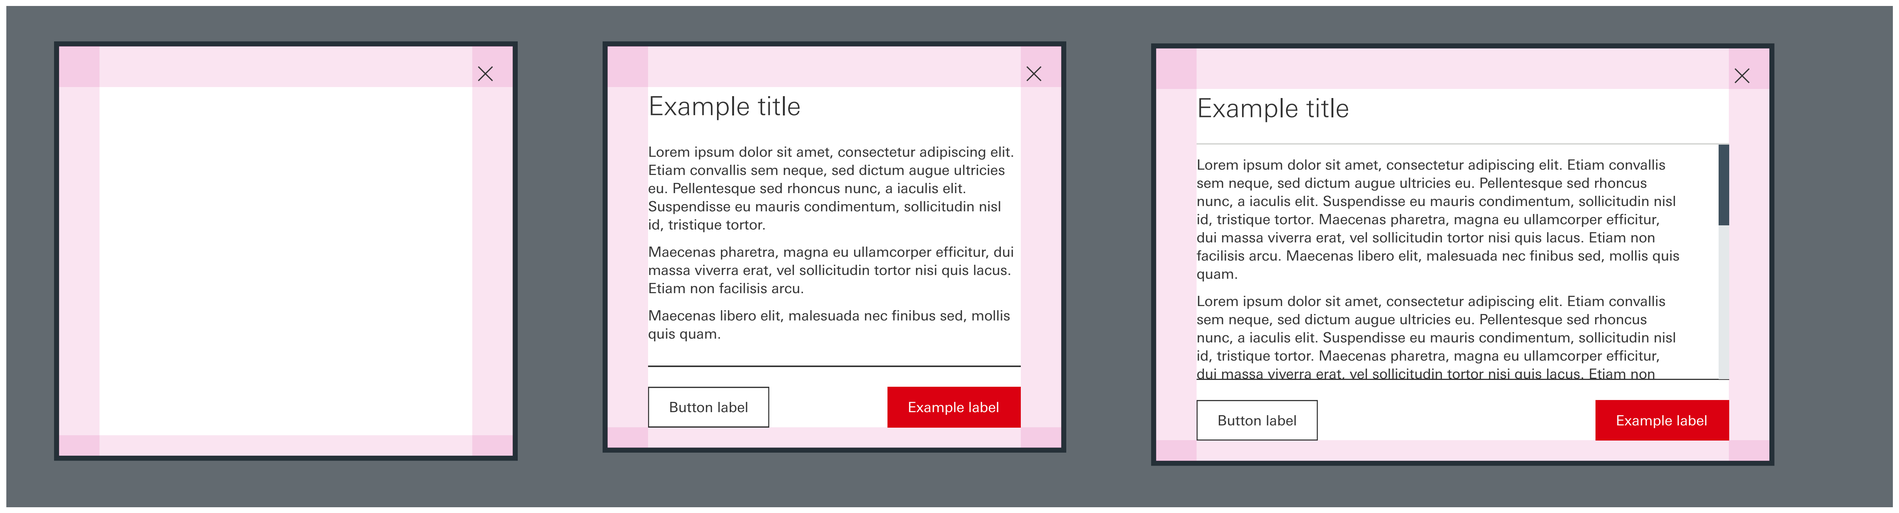
Dialogue modals are used to flag important warnings or to ask users confirm important actions (eg Delete).

Content

Fluid with min height 300px

Used to display additional information or short forms to capture information from the user. The modal can have a scrollbar and a sticky top or bottom if required.

Container



Padding: 40, 40, 20, 40px

Specs – Colour

On light / dark backgrounds

Modal container	Modal mask	Close icon	Divider
Bg: #FFFFFF Border: 5px #253038	Alpha 85% Bg: #253038	Icon SVG: 'Close' #333333 Size: 18x18px	Light rule: 1px #d7d8d6 Dark rule: 1px #333333

Specs – Structure

Configuration

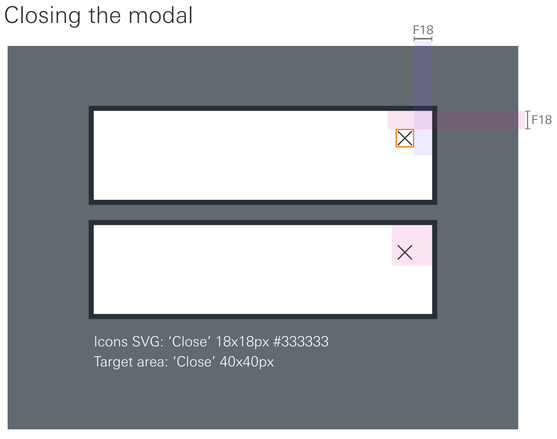
	Outer margins		Modal padding
Top (px)	min 40	Top (px)	40
Right (px)	min 40	Right (px)	40
Bottom (px)	min 40	Bottom (px)	20
Left (px)	min 40	Left (px)	40

Custom padding and max width

It should be possible to disable the padding for the sides and the bottom, for instance to be able to fit a date picker within the model on the smaller breakpoints.

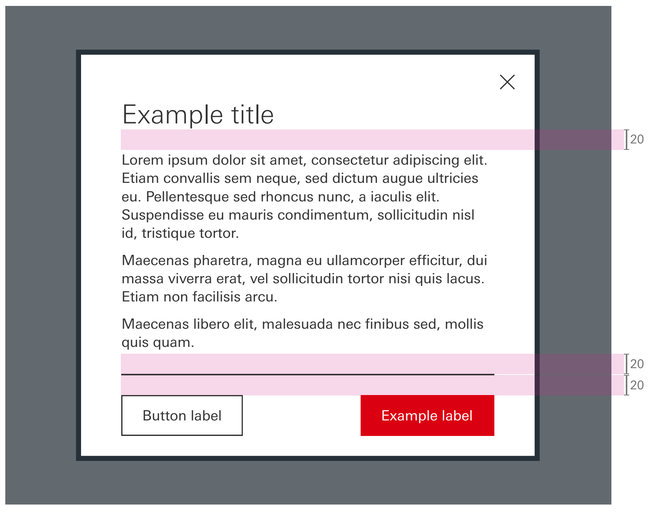
It should also be able to be able to select a custom max width for items. Please see Date Picker for example.

Closing the modal



The user can close the modal by pressing the close icon 'X' or the outside of the modal.

Margins



Title: S1 Light #333333

Behaviour

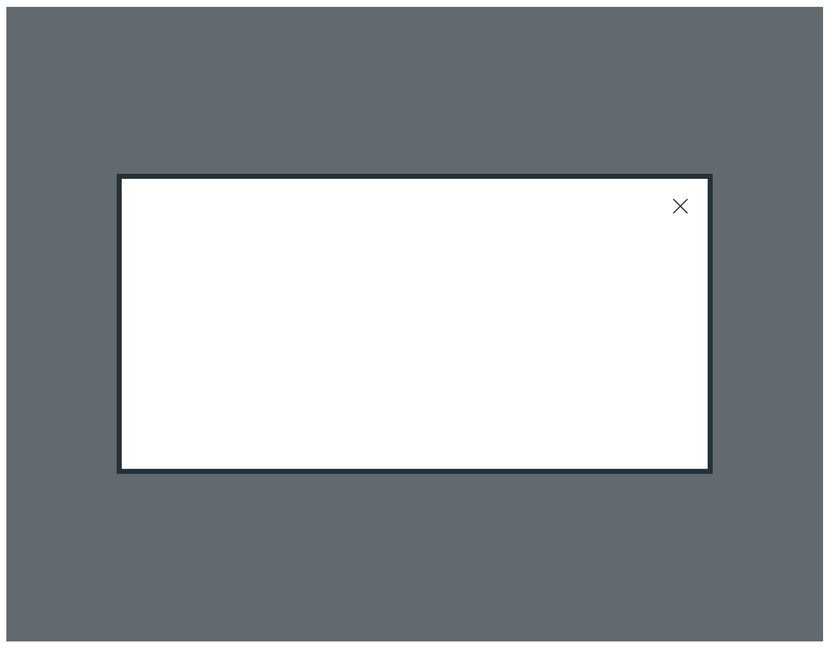
Scrolling

The preferred behaviour for modals is if the content is too long to fit on screen then the whole modal layer scrolls.

While the modal is open, the page content beneath is non interactive and does not scroll.

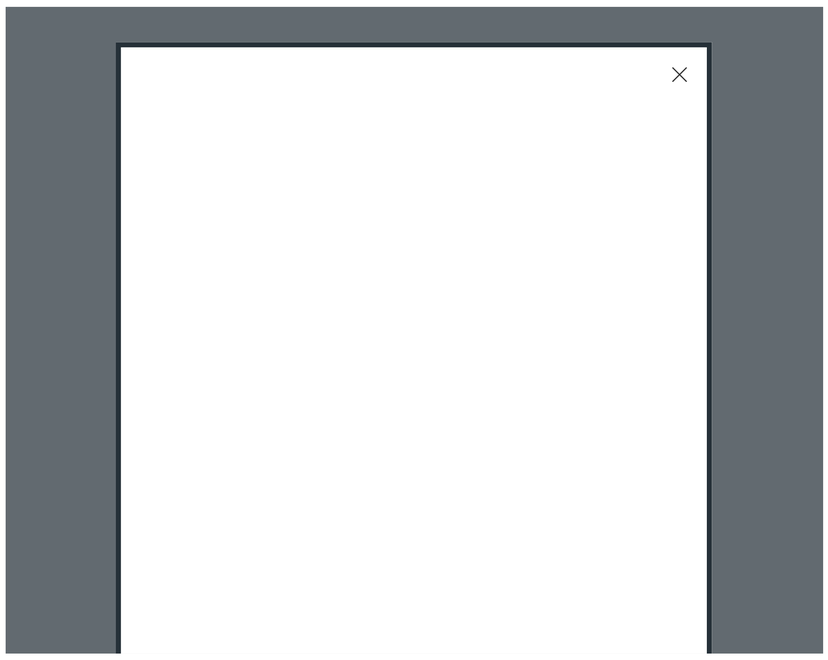
All breakpoints

Non Scrolling



The modal floats in the centre vertically.

Scrolling



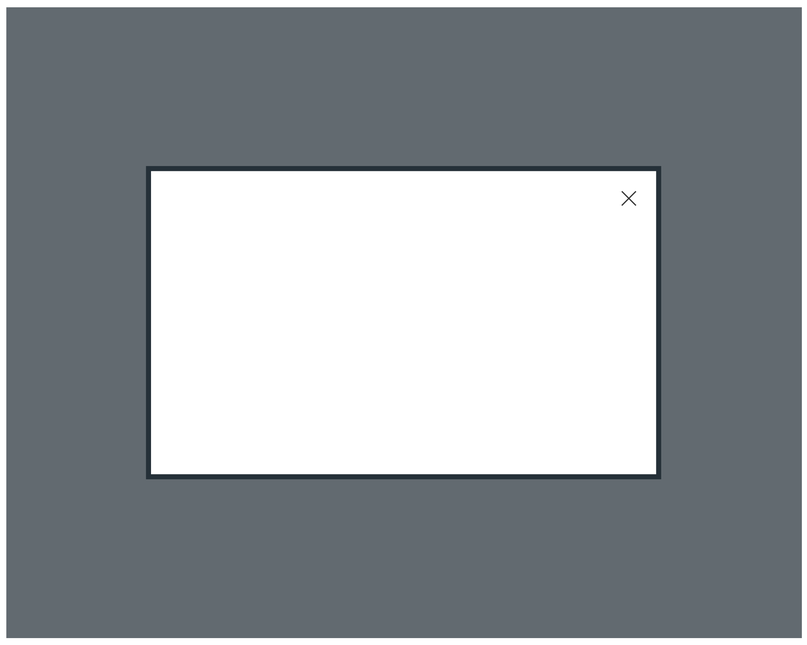
Default scroll position is 40px from the top of the browser to reinforce understanding that its a modal. Page uses the native OS scroll bar.

Size

Modals are set to a maximum size and are fluid in nature. This allows all modals to reduce from the in size to fit our smallest breakpoint.

The modals are set to a minimum height of 300px.

Dialog modal example



The minimum height of the modal is 300px.

The in-line notification should be kept to a maximum two lines.

The in-line notification should be kept to a maximum two lines.

Specs – Style

Important! Use of notification icons

Notification icons are 'pre-coloured' to ensure that AA colour contrast is maintained against the background on which they appear. Rather than the standard single-colour icons, these can include two colours. For instance, the green success icon for use OnLight has a white tick, rather than a transparent one that shows the background colour. This ensures that when it's used in notification boxes which have a green tint in the background, it still passes the AA contrast requirements.

Types

Label

The Label Pill pattern is used to help categorize content. The labels act as links through to the content represented. Do not use the Pill if it does not link anywhere, but rather use plain text to indicate the category.

These should never be used in place of standard CTAs or buttons, but applied within areas where content tagging is displayed to the user.

Example label

Icon SVG: 18x18px
SVG Name: 'Add Circle'

Example label

Icon SVG: 18x18px
SVG Name: 'Subtract Circle'

Target area

Example label

The target area covers the whole button

Tab focus

Example label

HSBC uses the default browser style to highlight focus states in addition to any custom designed focused state.

Visual alignment

Example label

The text should be visually aligned to be vertically centred using the Cap Height and the baseline of the font. The type alignment specs may need slight adjustment due to the difference in font rendering between sketch and code.

Line wrap

Example label over two lines

Line wrap should only occur when there is no more room to expand the button horizontally. The text lines up with the first line.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Compact Desktop - Pills 32px | 1 of 2

Types

Label

The Label Pill pattern is used to help categorize content. The labels act as links through to the content represented. Do not use the Pill if it does not link anywhere, but rather use plain text to indicate the category.

These should never be used in place of standard CTAs or buttons, but applied within areas where content tagging is displayed to the user.

Responsive - Progress Indicator | 1 of 2

Types

Indeterminate

Loading spinners show an infinitely moving animation for unknown or estimated wait times of between one and 10 seconds.

The animation can be accompanied by a message outlining the process taking place.

Determinate

Progress indicators show how much of the process has been completed, and should be used for any process with an estimated wait time of over 10 seconds.

The animation message should feedback on how much of the process has been completed.

Label default position

The default label position is underneath the spinner. However if height is restricted, the label can be placed to the right.

Responsive - Progress Tracker | 1 of 1

Types

Progress trackers are used when a form process is broken up over multiple steps, and where the user is expected to complete those steps in one go. They do not cover pre-steps or confirmation steps. They are not used if the number of steps may vary based on conditional logic.

Standard title with step number

Process title | Step 1 of 4

Each step highlighted is divided equally along the length of the line. So the first step of four would take up 25% of the overall track.

Standard title with step number

Process title | Step 2 of 4

The Selected Track would be 50% for step two out of four.

Option with no track bar

Progress title | Step 2 of 4

This version is normally used when there can be dynamically more steps generated through out a process.

Step title

The title of the step appears beneath the progress tracker. The process title stays the same throughout.

Title pre-step

Eligibility

Progress trackers do not cover pre-steps or confirmation steps.

Step title in process

Responsive - Radio buttons | 1 of 1

Types

Radio buttons are used when the user needs to select only one item from a predetermined list of five options or fewer. A single radio button is never used by itself. If the user is allowed to select more than one item from the list, consider using checkboxes.

Sketch note

Radio buttons can be inserted separately via the library but an option with the label is also available fro 'Form / Radio / Layout + Label'.

In-line

Field label

- (●) Option A
- ( ) Option B

When the decision is binary (e.g. Yes or No, On or Off), the options can be placed side by side. However when there are three or more options they should be stacked

Stacked

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Compact Desktop - Radio buttons 20px | 1 of 1

Types

Radio buttons are used when the user needs to select only one item from a predetermined list of five options or fewer. A single radio button is never used by itself. If the user is allowed to select more than one item from the list, consider using checkboxes.

Sketch note

Radio buttons can be inserted separately via the library but an option with the label is also available fro 'Form / Radio / Layout + Label'.

Responsive - Tables to cards

Visit create.hsbc for more information

Tables

When it can fit use a standard table

Blocks

When tables cannot fit within a screen size consider splitting the main table into smaller blocks by treating each row as a separate table. Whilst this decreases the effectiveness of being able to compare rows side by side, it does allow users to see all the content in-page without having to scroll horizontally.

Cards

This technique involves displaying the content in a non-tabular format (Divs) on smaller screens as opposed to the standard data table format (<TH> <TD>). This enables greater flexibility on smaller screens and is a technique becoming more popular for comparison tables. Depending on the table data type and functionality required, this technique can also be used for larger screen sizes.

This pattern needs to be prototyped and tested. Please contact your programme design lead and DD before using.

Types

Data tables display raw data sets and allow users to view data that is orderly and consumable. Tables take varying complexities according to project requirements but share fundamental structure and principles.

Data tables have added functionality for selecting rows and columns, and actioning items.

Sketch note

The symbols used for these tables are to be used as a guide. To create your your own tables from these symbols please take the following steps.

1. Copy one of the table headers or rows into your own document.

2. Break the symbol apart by selecting 'detach from symbol'. It's important to remember that although you have detached the symbol, all the colours styles and fonts still link back to the symbol library.

3. Select all the elements and create a new local symbol and rename it for your work flow.

4. You can now modify the number of columns etc to match your design requirements however you will still receive any colour updates from the main toolkit library if any changes are made.

Header

Header example

	Header example	Header example	Header example	Header example	Header example	Header example

No vertical borders at the end of each row. Header has it's own border style.

Group area hover style

Example

The hover style 'overlays' all borders in the row.

Row horizontal, vertical borders & hover

Standard and summary row

No vertical borders at the end of each row. The horizontal borders are the same for all rows apart from the End of Sheet row. The top most row of a table does not have a border.

If a cell has a individual action (expand link, hyperlink) then the cell has a background hover state in addition to the group hover.

Exceptions to the standard row borders

Selected

No vertical borders at the end of each row. A selected row has it's own colours for the vertical and bottom horizontal borders.

If a cell has a individual action (expand link, hyperlink) then the cell has a background hover state in addition to the group hover.

Error

No vertical borders at the end of each row. An error row has it's own colours for the vertical and bottom horizontal borders.

If a cell has a individual action (expand link, hyperlink) then the cell has a background hover state in addition to the group hover.

End of sheet

Sheet summary

No vertical borders at the end of each row. The end of sheet has it's own bottom border style

Cell elements

Sort icon

Sort: 12x12. Sort up / Sort down: 10x5

Checkbox

20x20px. Please see the 'Checkbox' page for styles and interactions

This pattern needs to be prototyped and tested. Please contact your programme design lead and DD before using.

Specs – Structure

Visual alignment

Header example

Cell example

The text should be visually aligned to be vertically centred using the Cap Height and the baseline of the font.

The type alignment specs may need slight adjustment due to the difference in font rendering between sketch and code.

Tab focus

Example label

HSBC uses the default browser style to highlight focus states in addition to any custom designed focused state.

	Content example	Content example	Content example	Content example	Content example	Content example

Cell elements are centred on the first line of the text.

Line wrap

	Header example	Header example over two lines or more	Header example	Header example	Header example	Header example
	Content example	Content example	Content example	Content example	Content example	Contet example over two lines or more

Target area

Cell Interactions

Content example	Cell link	Content example	Content example	Content example	Content example

Expand link: The whole cell is the target area
Checkbox: The whole cell is the target area
Text link: The link is individually selectable, even if the link is part of a 'grouped area link'.

Group, cell interactions and hover state

Content example	Content example	Content example	Cell link	Content example	Content example

A user can select a row by clicking anywhere on the row unless there is another type of link – such as an expand or text link – directly below the area they are selecting.

Content example	Content example	Content example	Cell link	Content example	Content example

Clicking on an individual link within a cell takes priority over a group area selection. In the illustration above the cell link would be activated rather than the row selection.

Content example	Cell link	Content example	Content example	Content example	Content example
Content example	Cell link	Content example	Content example	Content example	Content example

If an expand button is included in the row, this sits outside of the group area selection, and has it's own separate hover state.

Specs – Row selection

Header

Please see the 'Checkbox' specification page for interaction states.

The user can select or deselect all the rows in the table by checking and unchecking the header checkbox.

Unselected

No rows in the table are selected.

Selected

All rows in the table are selected. All rows have their selected states active.

Indeterminate

Some but not all the rows in the table are selected.

If the user clicks on the intermediate state this will select all rows and show the selected state.

Rows

Please see the 'Checkbox' specification page for interaction states.

Rows do not have an indeterminate state.

Unselected

The row is unselected

Selected

Row is selected and cell background changes state to emphasise the action

Sort

Sort indicator

In some data tables you may allow columns to be user sorted. This functionality is indicated to the user with the sort icon in the header row to the right of the label. Data re-orders to the most logical format for the type of data.

Default sorting

Although data will have some sorting order, eg alphabetical or chronological, the "column sorted" state is not used by default.

The column sorting indication is a user-activated control and should only be activated when initiated by the user.

Default S6

Unselected

Name	Number
111	AAA
222	BBB
333	CCC

Hover

Name	Number
111	AAA
222	BBB
333	CCC

222	BBB
333	CCC

Selected Z-A

Name	Number
333	CCC
222	BBB
111	AAA

Selected Z-A hover

Name	Number
111	CCC
222	BBB
333	AAA

Selected Z-A pressed

Name	Number
111	CCC
222	BBB
333	AAA

Selected A-Z

Name	Number
111	AAA
222	BBB
333	CCC

A different column is sorted

Name	Number
333	CCC
222	BBB
111	AAA

When the sort action is selected in another column, any previously sorted column returns to it's unselected state.

Expand row

Behaviour

The default behaviour is to allow users to control the interaction. We do not expand and close a row tray when a user selects a different expand row in the in the table. Automatic closing of rows can lead to the page jumping around which is very disorientating particularly on the smaller viewports.

Closed

Hover / pressed

Open

Open hover / pressed

This pattern needs to be prototyped and tested. Please contact your programme design lead and DD before using.

Row text: S6 Regular

This pattern needs to be prototyped and tested. Please contact your programme design lead and DD before using.

Types

Data tables display raw data sets and allow users to view data that is orderly and consumable. Tables take varying complexities according to project requirements but share fundamental structure and principles.

Data tables have added functionality for selecting rows and columns, and actioning items.

Sketch note

The symbols used for these tables are to be used as a guide. To create your your own tables from these symbols please take the following steps.

1. Copy one of the table headers or rows into your own document.

2. Break the symbol apart by selecting 'detach from symbol'. It's important to remember that although you have detached the symbol, all the colours styles and fonts still link back to the symbol library.

3. Select all the elements and create a new local symbol and rename it for your work flow.

4. You can now modify the number of columns etc to match your design requirements however you will still receive any colour updates from the main toolkit library if any changes are made.

Specs – Structure

Visual alignment

Header example

Cell example

The text should be visually aligned to be vertically centred using the Cap Height and the baseline of the font.

The type alignment specs may need slight adjustment due to the difference in font rendering between sketch and code.

Tab focus

Example label

HSBC uses the default browser style to highlight focus states in addition to any custom designed focused state.

	Content example	Content example	Content example	Content example	Content example	Content example

Cell elements are centred on the first line of the text.

Line wrap

		Header example	Header example	Header example over two lines or	Header example	Header example	Header example
		Content example	Content example	Contet example over two lines or more	Content example	Content example	Content example

Target area

Cell Interactions

		Content example	Cell link	Content example	Content example	Content example	Content example

Expand link: The whole cell is the target area
Checkbox: The whole cell is the target area
Text link: The link is individually selectable, even if the link is part of a 'grouped area link'.

Group, cell interactions and hover state

	Content example	Content example	Content example	Cell link	Content example	Content example

A user can select a row by clicking anywhere on the row unless there is another type of link – such as an expand or text link – directly below the area they are selecting.

	Content example	Content example	Content example	Cell link	Content example	Content example

Clicking on an individual link within a cell takes priority over a group area selection. In the illustration above the cell link would be activated rather than the row selection.

		Content example	Cell link	Content example	Content example	Content example	Content example
		Content example	Cell link	Content example	Content example	Content example	Content example

If an expand button is included in the row, this sits outside of the group area selection, and has it's own separate hover state.

Specs – Row selection

Header

Please see the 'Checkbox' specification page for interaction states.

The user can select or deselect all the rows in the table by checking and unchecking the header checkbox.

Unselected

No rows in the table are selected.

Selected

All rows in the table are selected. All rows have their selected states active.

Indeterminate

Some but not all the rows in the table are selected.

If the user clicks on the intermediate state this will select all rows and show the selected state.

Rows

Please see the 'Checkbox' specification page for interaction states.

Rows do not have an indeterminate state.

Unselected

The row is unselected

Selected

Row is selected and cell background changes state to emphasise the action

Sort

Sort indicator

In some data tables you may allow columns to be user sorted. This functionality is indicated to the user with the sort icon in the header row to the right of the label. Data re-orders to the most logical format for the type of data.

Default sorting

Although data will have some sorting order, eg alphabetical or chronological, the "column sorted" state is not used by default.

The column sorting indication is a user-activated control and should only be activated when initiated by the user.

Default S5

Unselected

Name	Number
AAA	111
BBB	222
CCC	333

Hover

Name	Number
AAA	111
BBB	222
CCC	333

Pressed

CCC	333

A different column is sorted

Name	Number
CCC	333
BBB	222
AAA	111

When the sort action is selected in another column, any previously sorted column returns to it's unselected state.

Expand row

Behaviour

The default behaviour is to allow users to control the interaction. We do not expand and close a row tray when a user selects a different expand row in the in the table. Automatic closing of rows can lead to the page jumping around which is very disorientating particularly on the smaller viewports.

Types

Tables are used to present sets of data in a structured and logical way, to help users digest and understand it.

Tables and the data they contain can vary in terms of content, user requirements and functional features. When designing a table, focus on the what the user needs to achieve or understand and always try to present data in the simplest way possible.

Sketch note

The symbols used for these tables are to be used as a guide. To create your your own tables from these symbols please take the following steps.

1. Copy one of the table headers or rows into your own document.

2. Break the symbol apart by selecting 'detach from symbol'. It is important to remember that although you have detached the symbol, all the colours styles and fonts still link back to the symbol library.

3. Select all the elements and create a new local symbol and rename it for your work flow.

4. You can now modify the number of columns etc to match your design requirements.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

Horizontal

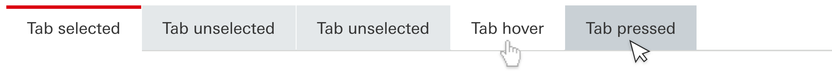
Horizontal tabs are used to group related content into digestible sections. The content contained within each tab should be related in some way or have some connected theme. There should be a minimum of two tabs used. As a guideline, do not use more than six tabbed pieces of content.

Dropdown

For the 320 and 480 breakpoints, the tabs are displayed in the form of a non-native dropdown. The tab differs from a standard dropdown in that it includes a Brand Bar and does not go full width, but leaves space for a grey panel to the right-hand side.

OnLight

Breakpoints 760+



OnDark

On dark Breakpoints 760+

Mobile

Breakpoints 320 – 759

Vertical

When it is necessary to use more than six tabs, vertical tabs can be used. There is no recommended maximum number of tabs, it will depend on the context of use.

Dropdown

There is no responsive component currently available, please discuss with your design lead if one is required and follow the 'New Pattern Request' process.

Types

Horizontal Taboggle

There are instances within forms where users need to be presented with more information or are required to fill in more details, depending on the option they select.

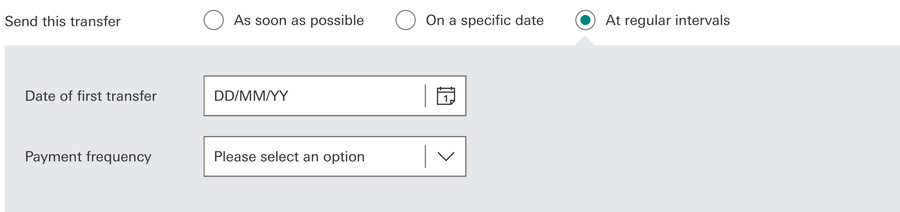
If this is the case, these additional options can be hidden or revealed, depending on the user's choice via a taboggle.

The taboggle is usually triggered by radio button selection. (See radio buttons for spec.)

The content below the taboggle trigger will be pushed downwards.

Radio button unselected

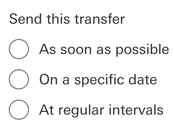
Radio button selected and taboggle activated



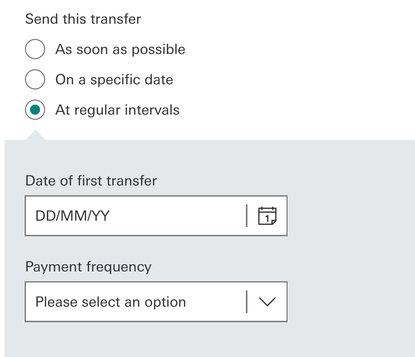
Vertical Taboggle

see above

Radio button unselected



Radio button selected and taboggle activated



Specs – Style and Structure

Container

The taboggle container expands horizontally to the width of the form, vertically to the height to accomodate the form fields.

The taboggle pointer is center aligned with the trigger button.

Target area

Example text

The target area covers the whole area of the input

Tab focus

Example text

HSBC uses the default browser style to highlight focus states in addition to any custom designed focused state.

Character count

A character limit for text boxes can be shown below the field. This should not prevent the user from inputting text once the limit is reached but flag that the limit has been exceeded and by how much. For higher or unknown character limits, users can be given the ability to drag the corner of the text area out to give them more visibility of what they are typing.

Unselected

Field label
Input text
250 characters

Character Font Style: S6 #333333

Typing

Field label
At HSBC, we believe that how we do business|
56 of 250 characters

The amount of characters left counts downwards

Overun

Field label
At HSBC, we believe that how we do business is as important as what we do. We want to achieve good e believe that how we do business is as important
10 characters over the limit

It shows how many characters you have over typed. When a user starts deleting characters it counts down to zero. Once under the limit it displays the normal non warning counter.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Compact Desktop - Text Area 22px | 1 of 1

Types

The multi-line text field is tall enough to contain several lines of text by default. A character limit for text boxes can be shown below the field. For higher or unknown character limits, users can be given the ability to drag the corner of the text area out to give them more visibility of what they are typing.

Scroll bar

The text area uses a native scroll bar styling across all devices.

Using the font utility class 'Article Large' for body copy and lists

This class is only to be used for the main body copy for articles and reports to enhance readability when the standard body copy S5 is deemed to be too small for the content width.

As well as using the class for the body copy it can be used for ordered, unordered and custom lists within an article page. The class has all the same inline linking style properties as our S5 body copy.

RScale:1 TScale:1
Utility Class: Article Large

At HSBC, we recognise that how we do business is as important as what we do. We have a responsibility to our customers, employees and the communities in which we operate and understand. that to achieve success in the long term, economic growth must also be sustainable.

We aim to minimise our impact on the environment and to help the global transition to a low-carbon economy. We are mindful of our social responsibilities, and committed to high standards of governance.

Sub header example

At HSBC, we recognise that how we do business is as important as what we do. We have a responsibility to our customers, employees and the communities in which we operate and understand.

Custom list example

With the HSBC Classic Credit Card you'll get:

- ✓ no Annual fee
- ✓ earn cashback from your favourite shopping brands with Visa Offers.
- ✓ build or improve your credit rating
  This card could help you build or your credit score over time, if managed well.

Unordered list example

With the HSBC Classic Credit Card you'll get:

- no Annual fee
- earn cashback from your favourite shopping brands with Visa Offers.
- build or improve your credit rating
  This card could help you build or your credit score over time, if managed well.

Ordered list example

With the HSBC Classic Credit Card you'll get:

1. no Annual fee
2. earn cashback from your favourite shopping brands with Visa Offers.
3. build or improve your credit rating
   This card could help you build or your credit score over time, if managed well.

Accessibility

Testing

Please make sure all components adhere to the latest HSBC Accessibility Framework. All new development work should be reviewed by DD before being released.

Text resize

Make sure your designs, and their implementation in HTML, do not break when the font size is increased to 200%.

Pinch & zoom

Do not disable any browser 'pinch and zoom' functionality.

Focus state

When navigated to by tabbing, all focusable elements must have a visible outline so that users can track where they are in the content. HSBC uses the default browser style to highlight focus states **in addition** to any custom designed focused state.

For more information on the HSBC Accessibility Framework please go to create.hsbc

Types

The Text component controls the responsive behaviour of typography across different breakpoints in relation to column width.

At larger breakpoints it's important that the text does not stretch full width in order to maintain readability.

The text component can contain any of our approved typography styles.

Breakpoints 320 – 959

12 columns max width

320px

At HSBC, we believe that how we do business is as important as what we do. We want to achieve good results in a way that treats our customers fairly and helps to strengthen communities and ensure a properly functioning financial system. Our values are central to achieving.

12 columns

320px

Breakpoints 960 – 1279

10 columns max width

960px

At HSBC, we believe that how we do business is as important as what we do. We want to achieve good results in a way that treats our customers fairly and helps to strengthen communities and ensure a properly functioning financial system. At HSBC, we believe that how we do business is as important as what we do. We want to achieve good results in a way that treats our customers fairly and helps to strengthen communities and ensure a properly functioning financial system.

At HSBC, we believe that how we do business is as important as what we do. We want to achieve good results in a way that treats our customers fairly and helps to strengthen communities and ensure a properly functioning financial system. Our values are central to achieving these aims.

1280px

Types

Tooltips can be used to provide additional information that is only required by a small percentage of users, without impacting the experience of the majority (eg explaining what a CVC number is).

They should never hide information that the majority of users will need, or that is essential to complete a task. Adequate support should be provided up-front using contextual help.

Sketch note:

The examples opposite are made responsive within their sketch folders. To resize select the folder rather than individual elements.
